Instalação e Configuração do Ecossistema Hadoop

Sumário

1.	Versão	4
2.	Configuração do Ambiente	5
2.1.	Criação da Máquina Virtual no VirtualBox	6
2.2.	Instalação do Sistema Operacional.....	15
2.3.	Instalação de Utilitários do Sistema Operacional.....	35
2.4.	Instalação do MySQL.....	46
3.	Instalação do servidor ssh	55
4.	Instalação do Java 8	65
4.1.	Removendo o OpenJDK.....	65
4.2.	Instalação do JDK	67
5.	Instalação e Configuração do Hadoop	75
5.1.	Criando o usuário hadoop	75
5.2.	Configuração do ssh sem senha.....	78
5.3.	Download e Instalação do Hadoop	85
5.3.1.	Editando o arquivo hosts	85
5.3.2.	Download do Hadoop	87
5.4.	Configuração do Hadoop	92
5.4.1.	Editar arquivos de configuração do Hadoop	92
5.4.2.	Formatando o Namenode	95
5.4.3.	Iniciando o Hadoop	96
5.4.4.	Iniciando o Yarn.....	98
5.5.	Processando Big Data	102
6.	Instalação e Configuração do Zookeeper.....	120
6.1.	Download e Instalação do Zookeeper.....	120
6.2.	Configurando do Zookeeper	121
7.	Instalação e Configuração do HBase.....	133
7.1.	Download e Instalação do HBase.....	133
7.2.	Configurando o HBase	134
8.	Instalação e Configuração do Hive	145
8.1.	Download e Instalação do Hive	145
8.2.	Configurando o Hive.....	146
9.	Instalação e Configuração do Pig.....	157
9.1.	Download e Instalação do Pig.....	157
9.2.	Configurando do Pig	158
10.	Instalação e Configuração do Spark	165
10.1.	Download e Instalação do Spark	165
11.	Instalação e Configuração do Sqoop	172
11.1.	Download do Sqoop	172
11.2.	Configuração do Sqoop	173
12.	Instalação e Configuração do Apache Flume.....	181

13. Instalação e Configuração do Ambari (Opcional)188

1. Versão

Este documento foi criado pela equipe Data Science Academy e pode ser distribuído livremente, desde que se faça menção à fonte.

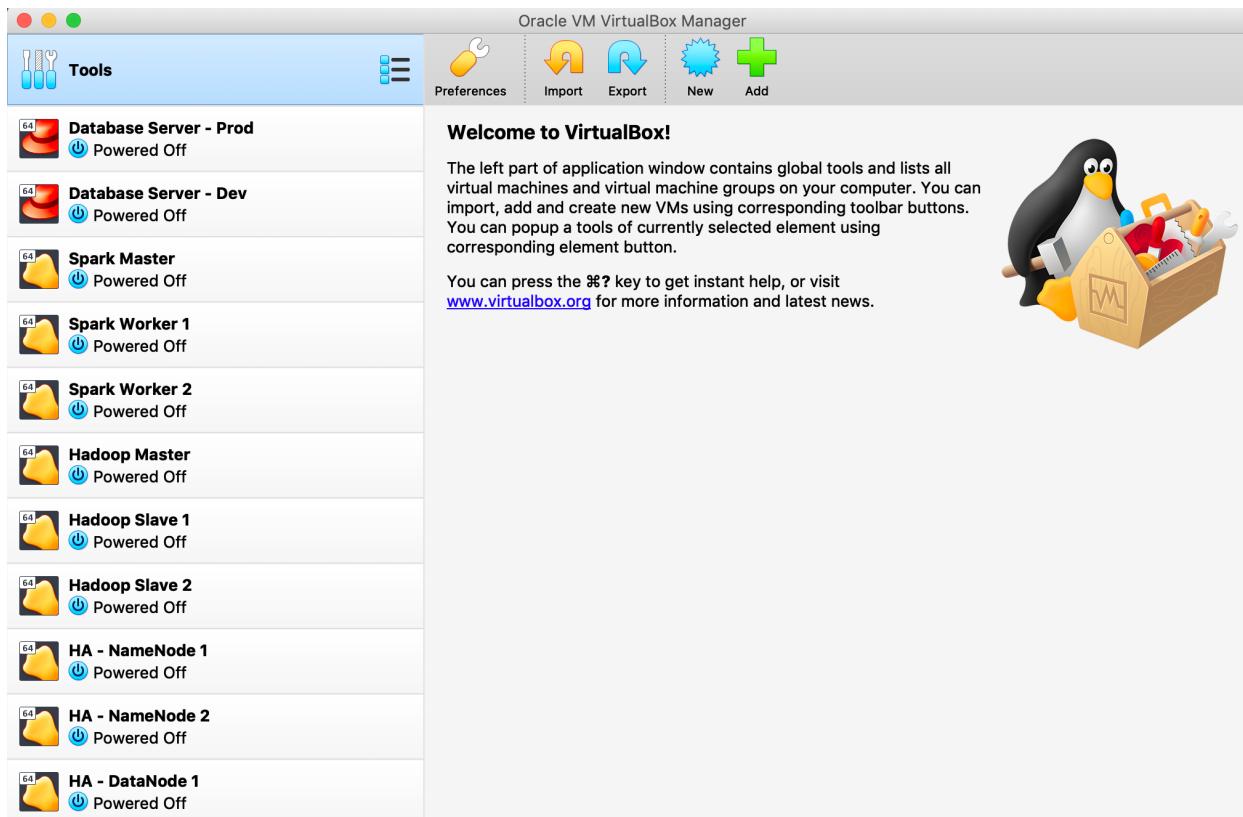

Versão	Ação	Data
1.0	Criação do documento	28/07/2019

2. Configuração do Ambiente

Item	Versão
Virtual Box	6.0.8
Sistema Operacional	CentOS 7.6 (64 bits) ou CentOS 6.8 (32 bits)
Interface Gráfica	Gnome
Firefox Web Browser	60.7
Java	1.8
Apache Hadoop	3.2.0
Apache Zookeeper	3.5.5
Apache Hbase	2.2.0
Apache Hive	3.1.1
Apache Pig	0.17.0
Apache Spark	2.4.3
Apache Sqoop	1.4.7
Apache Flume	1.9.0
Apache Ambari	2.4.1

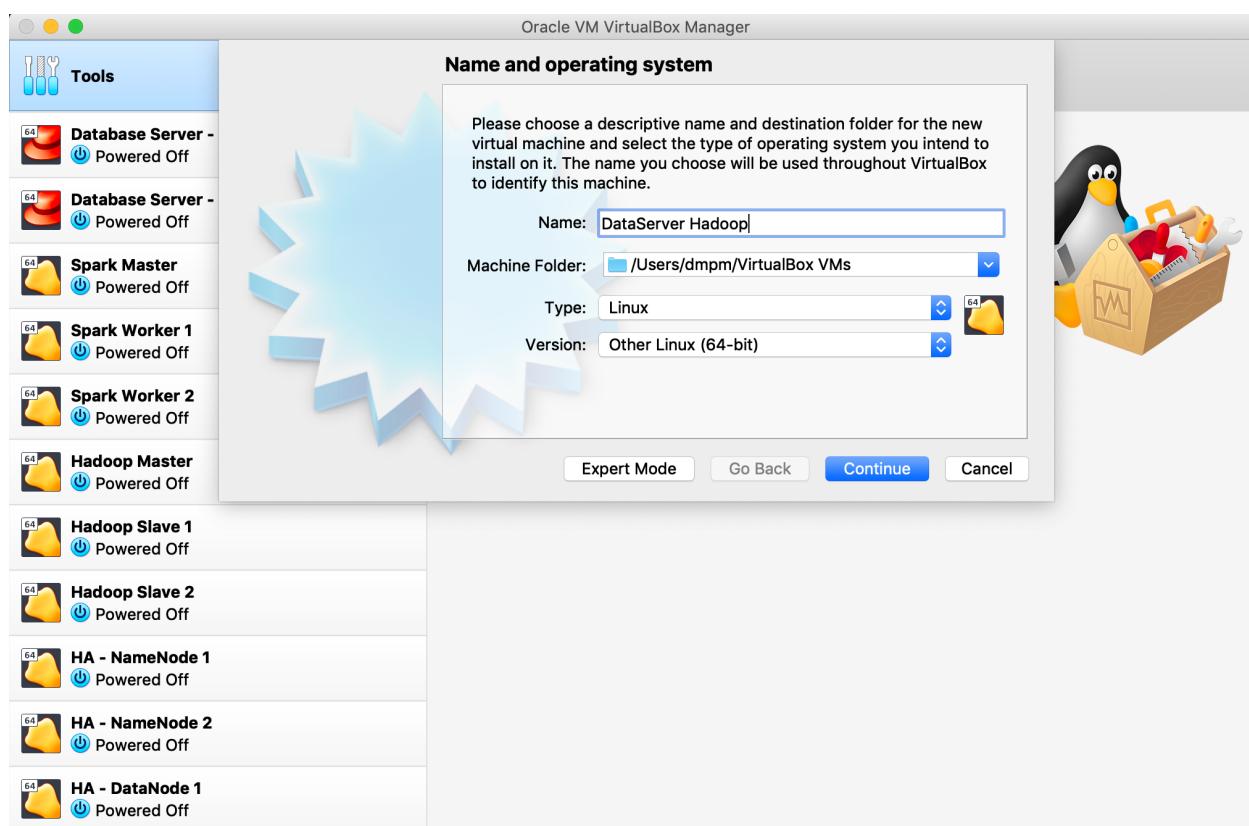

2.1. Criação da Máquina Virtual no VirtualBox

O Oracle VM Virtual Box é gratuito e pode ser baixado em <https://www.virtualbox.org>. Existem versões disponíveis para Windows, MAC, Linux e Solaris. Aqui utilizaremos a versão 6.0 e o tutorial será o mesmo independente do sistema operacional do seu computador. O uso do VirtualBox não é obrigatório e você pode instalar em uma máquina física se desejar.

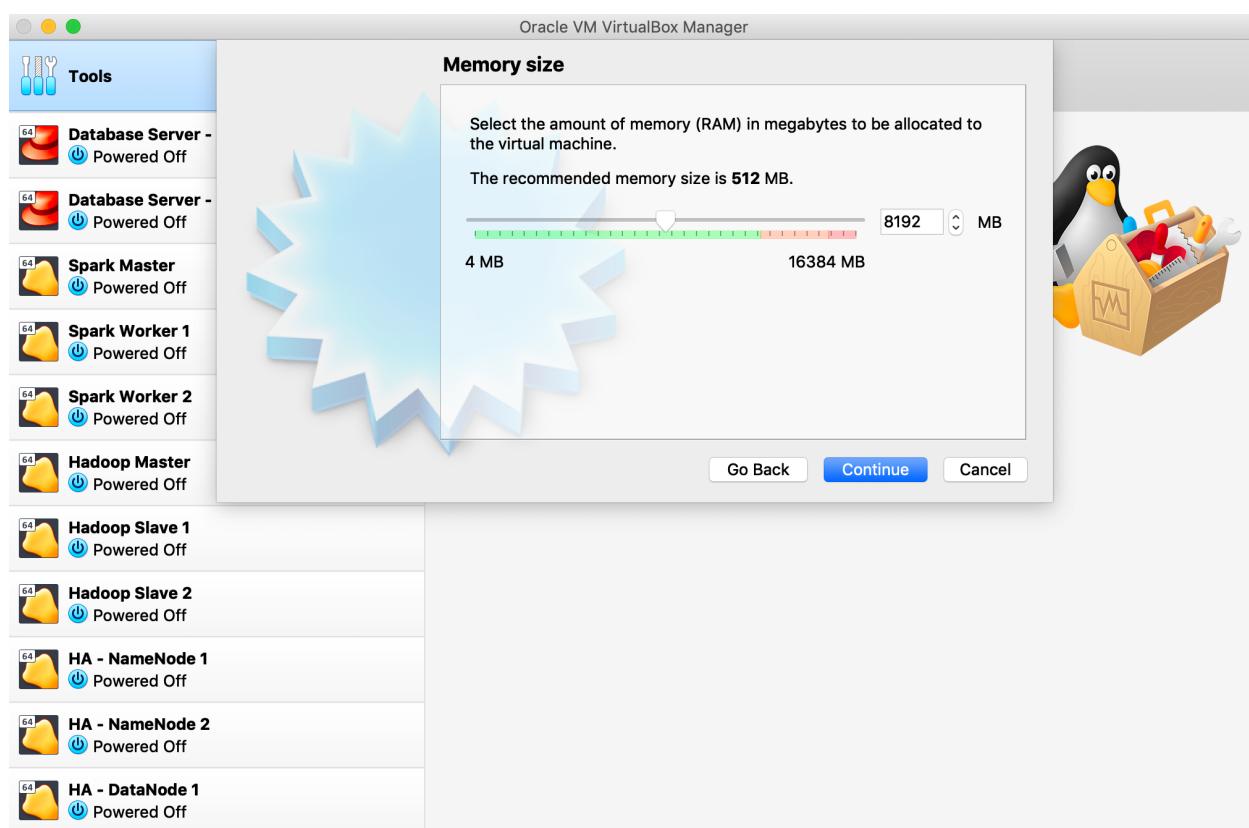

Abrindo o Gerenciador do Oracle Virtual Box

Instalação e Configuração do Ecossistema Hadoop

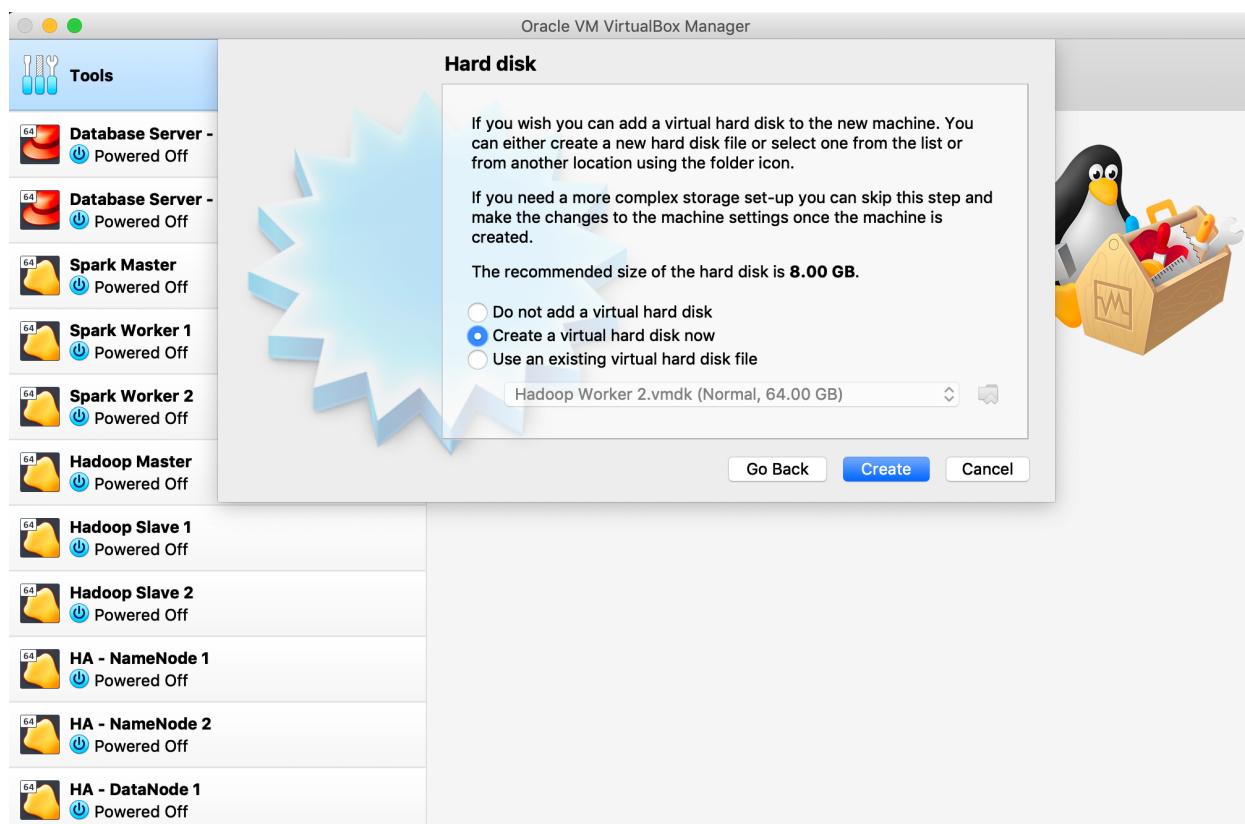

Definindo o nome da máquina virtual e a versão do sistema operacional

Instalação e Configuração do Ecossistema Hadoop

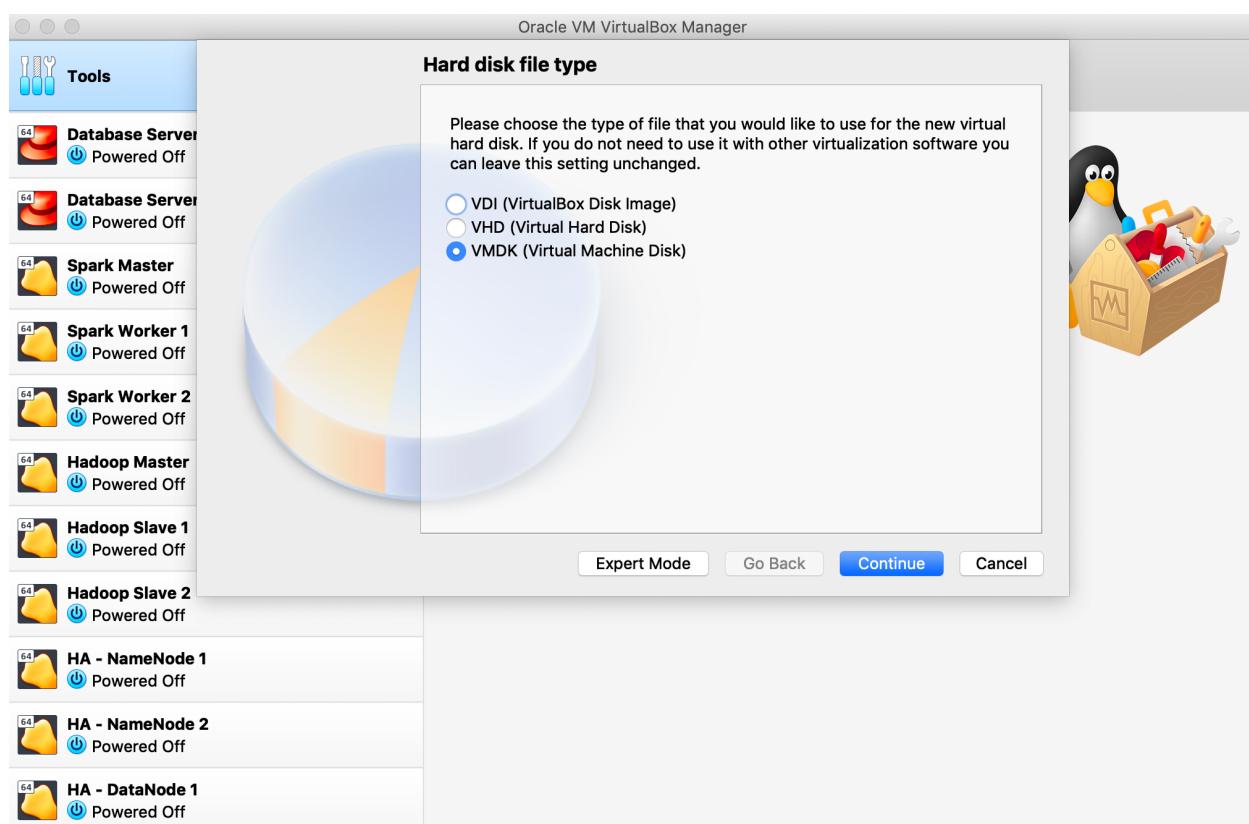

Configure metade da memória física do seu computador para a VM

Instalação e Configuração do Ecossistema Hadoop

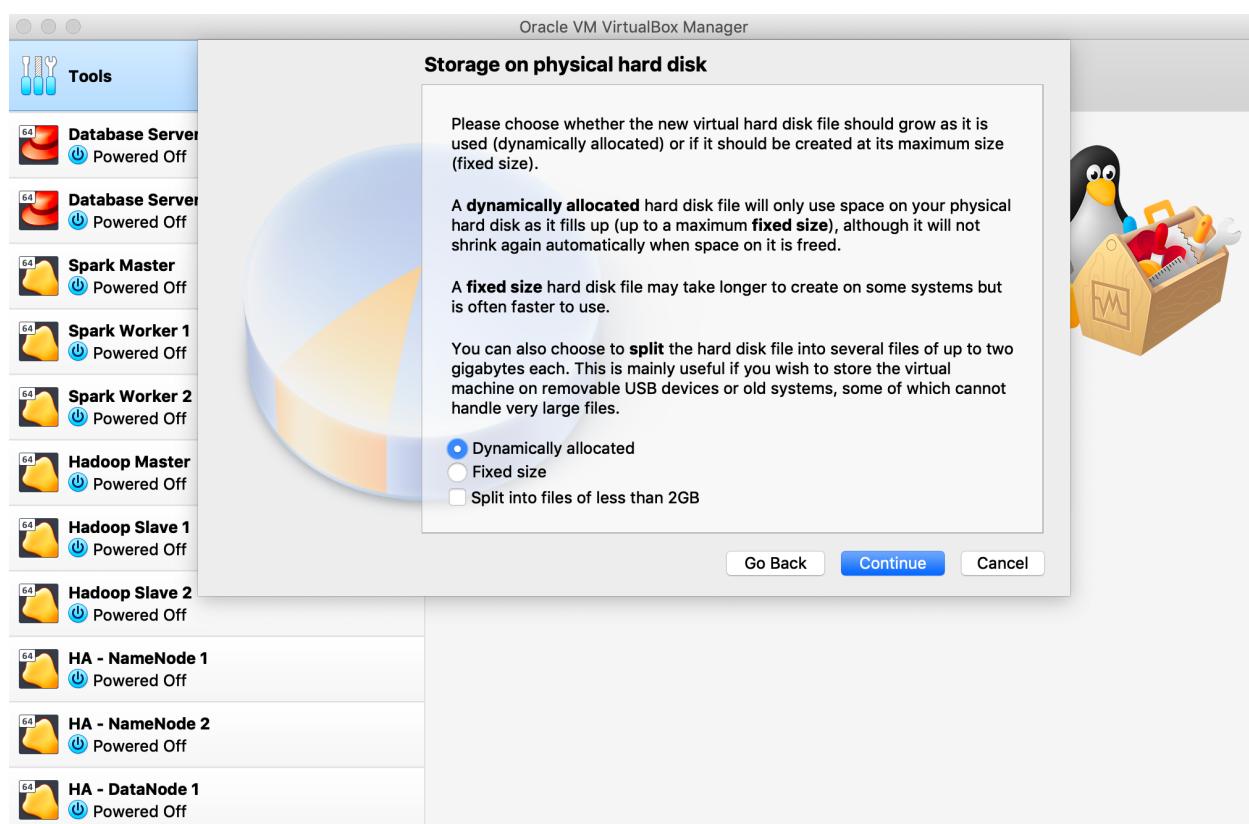

Criar um novo disco rígido virtual

Instalação e Configuração do Ecossistema Hadoop

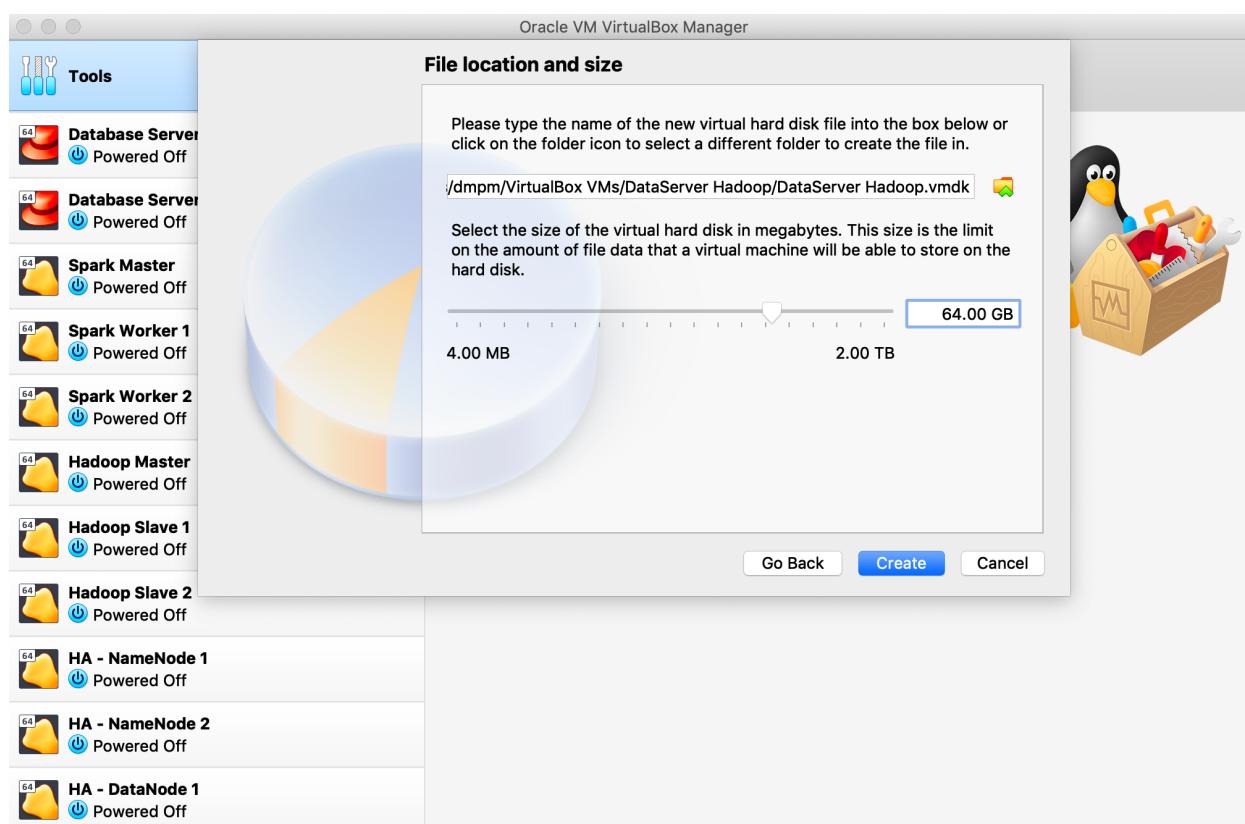

Selecione a opção VMDK

Instalação e Configuração do Ecossistema Hadoop

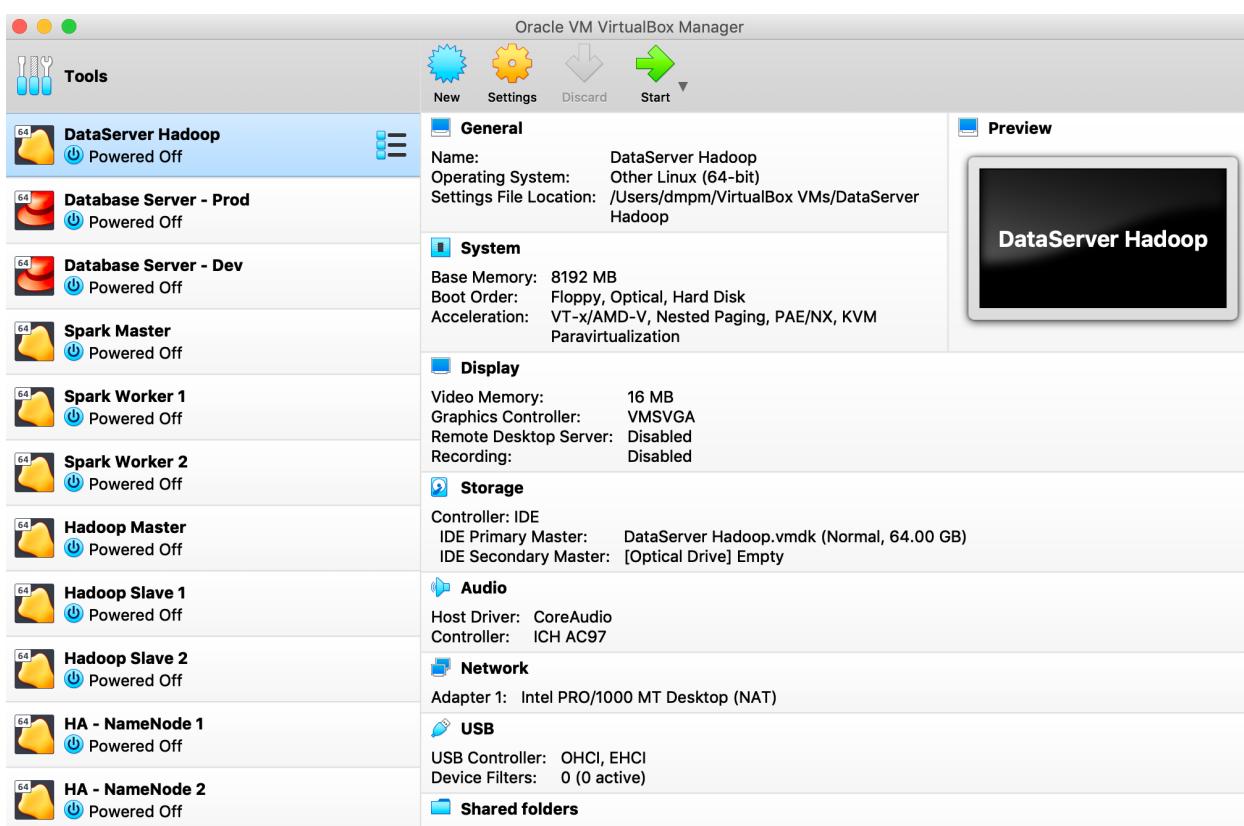

O disco deve ser alocado dinamicamente

Instalação e Configuração do Ecossistema Hadoop

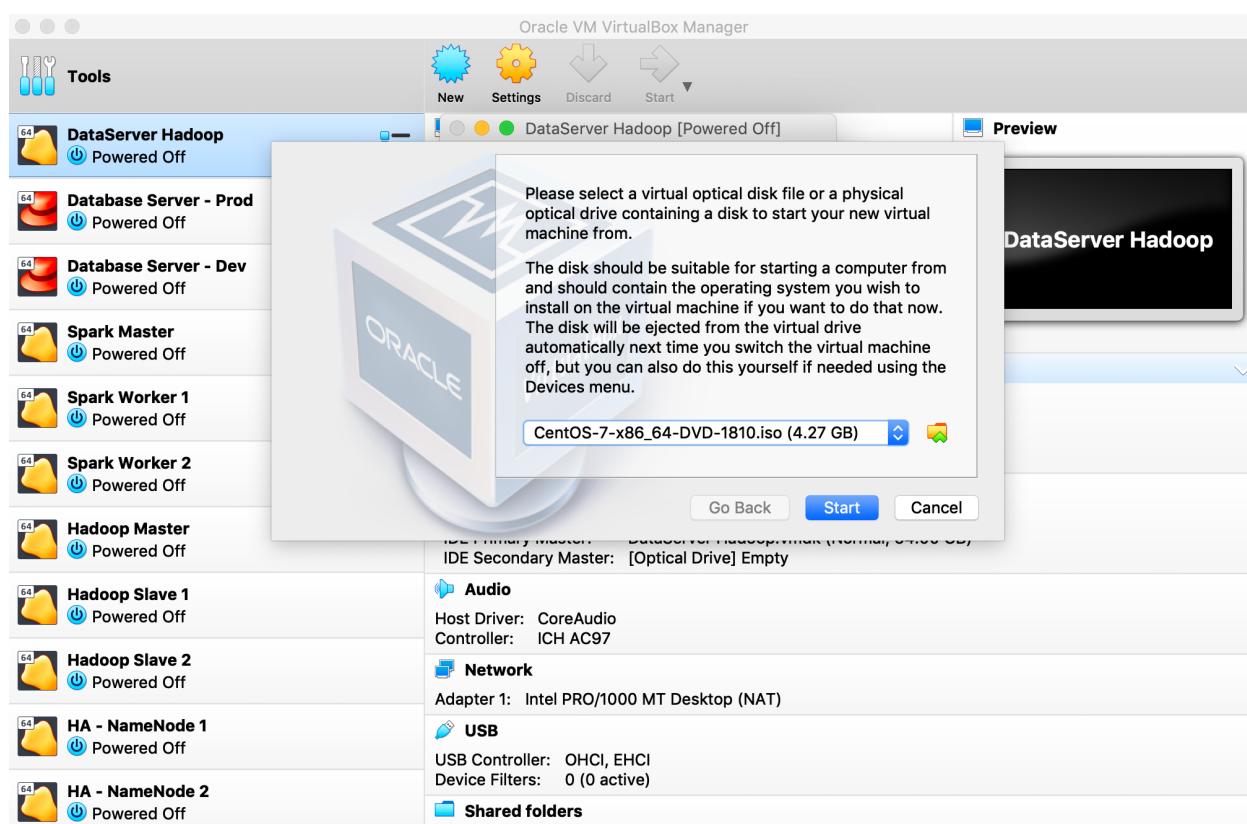

Selecione 64 GB para o disco virtual

Instalação e Configuração do Ecossistema Hadoop

Máquina virtual criada. Selecione a VM e clique no botão Start para inicializar a VM.

Instalação e Configuração do Ecossistema Hadoop

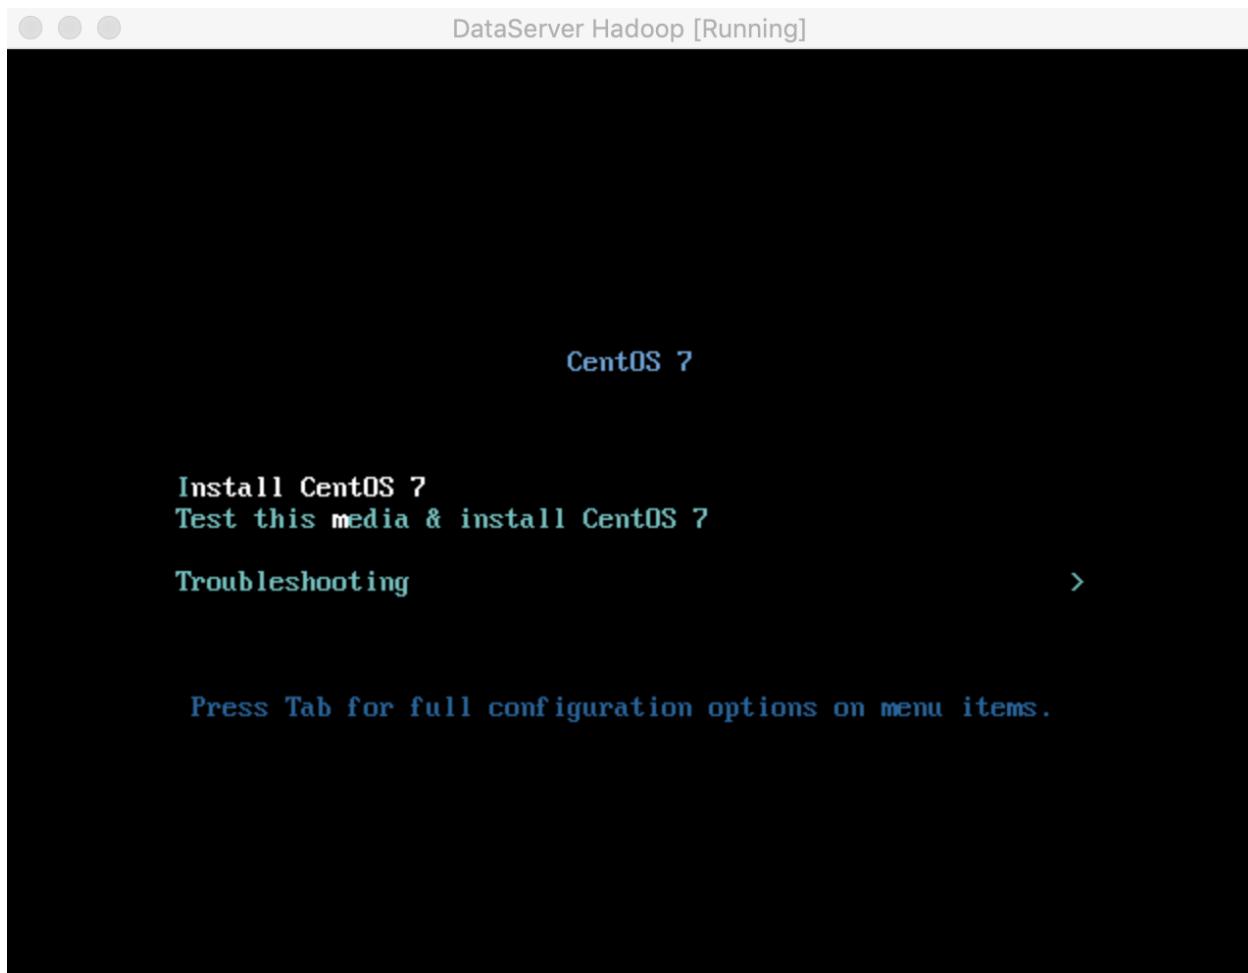

Selecione a mídia de instalação do sistema operacional

Utilizaremos o CentOS versão 7 64 bits. Caso sua máquina seja 32 bits você deve usar CentOS versão 6.8. Em ambos os casos faça o download do DVD de instalação como imagem .iso

CentOS 64 bits (versão 7):
http://isoredirect.centos.org/centos/7/isos/x86_64/

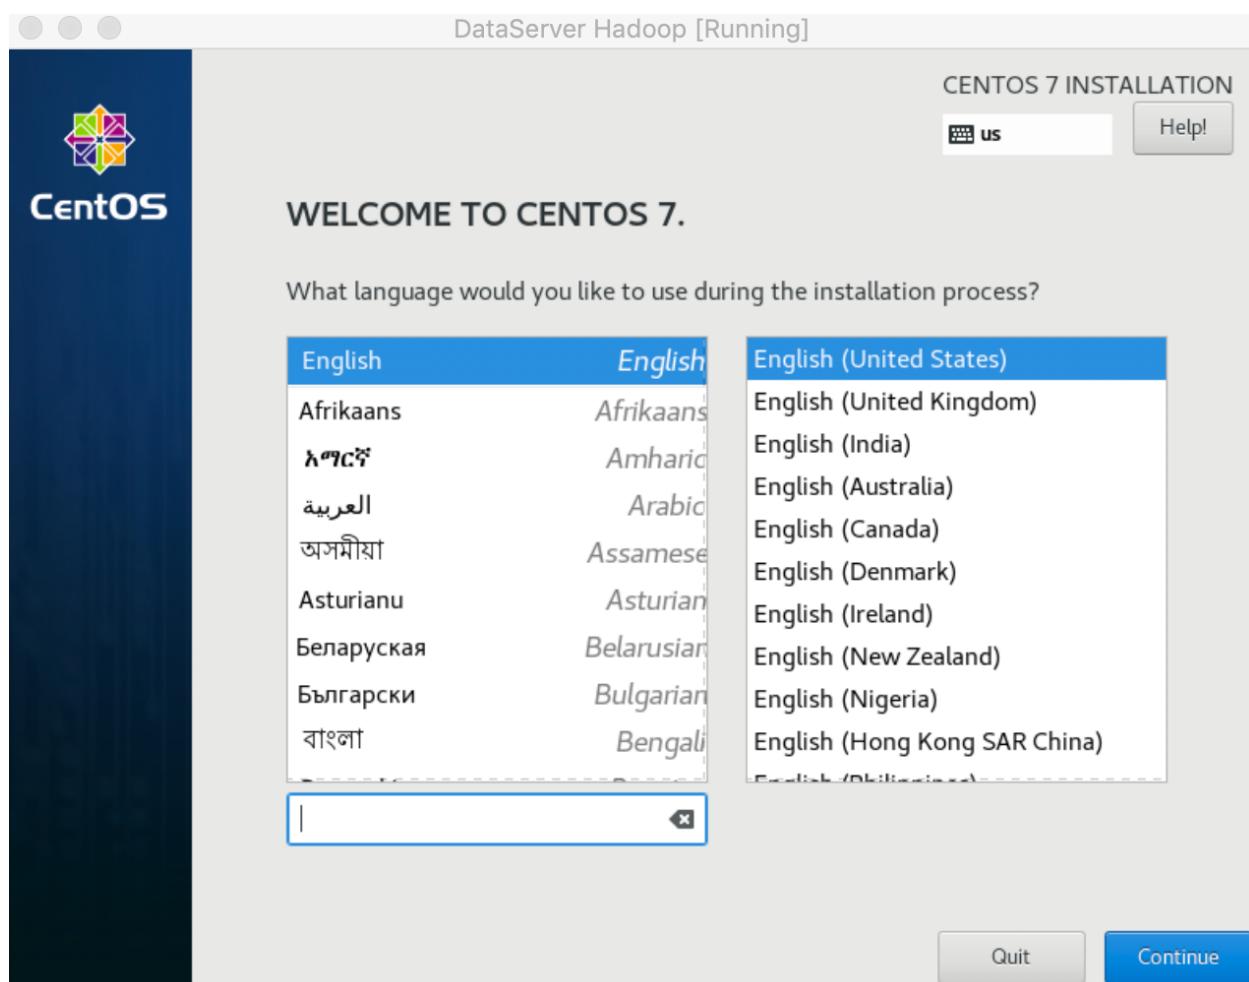

CentOS 32 bits (versão 6.8):
<http://centos.mirror.netelligent.ca/centos/>

2.2. Instalação do Sistema Operacional

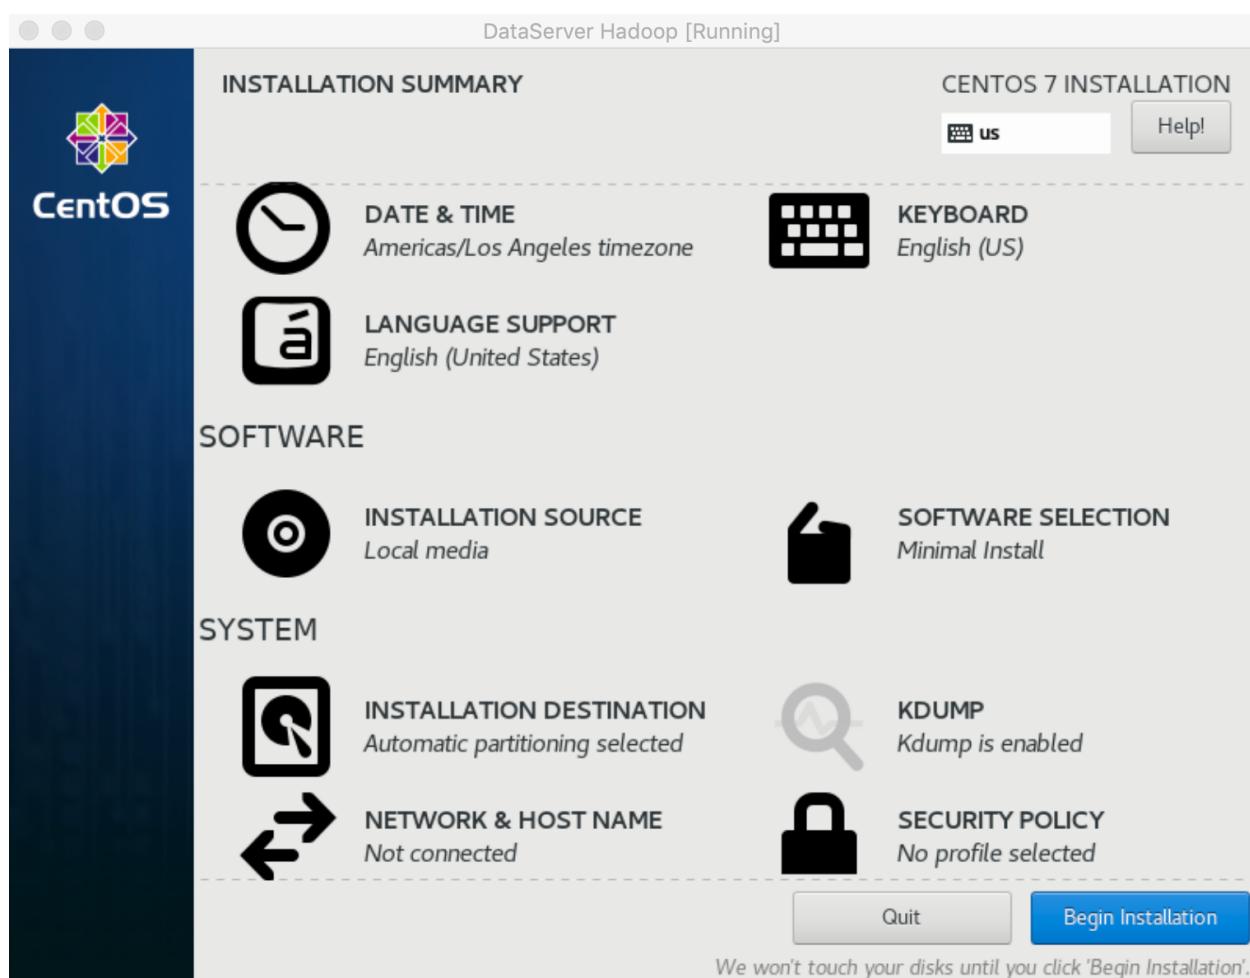

Selecione a opção de Instalação do Sistema Operacional CentOS 7

Instalação e Configuração do Ecossistema Hadoop

Seleção do idioma usado na instalação

Instalação e Configuração do Ecossistema Hadoop

Instalação e Configuração do Ecossistema Hadoop

The screenshot shows a terminal window titled "DataServer Hadoop [Running]". The window has a standard Linux desktop interface at the top with icons for Applications, Places, Terminal, and status indicators for battery, signal, and volume. The terminal itself has a light gray background and a dark gray border. The prompt is "aluno@dataserver:~\$". Below the prompt, the command "sudo yum install mysql-community-server" is visible, with the cursor positioned at the end of the line. At the bottom of the terminal window, there is a toolbar with various icons and a status bar indicating "1 / 4".

Esse comando inicia a instalação do MySQL:

```
sudo yum install mysql-community-server
```

Instalação e Configuração do Ecossistema Hadoop

```

Instalação e Configuração do Ecossistema Hadoop

A screenshot of a Linux desktop environment showing a terminal window. The window title is "Terminal". The terminal prompt is "aluno@dataserver:~". The user has typed the command "sudo gedit /etc/ssh/sshd_config". The window has standard Linux window controls (minimize, maximize, close) and is set to "Sáb, 01:04". The status bar at the bottom shows the terminal path "aluno@dataserver:~" and the page number "1 / 4".

Instalação e Configuração do Ecossistema Hadoop

```
*sshd_config
/etc/ssh

# $OpenBSD: sshd_config,v 1.93 2014/01/10 05:59:19 djm Exp $

# This is the sshd server system-wide configuration file. See
# sshd_config(5) for more information.

# This sshd was compiled with PATH=/usr/local/bin:/usr/bin

# The strategy used for options in the default sshd_config shipped with
# OpenSSH is to specify options with their default value where
# possible, but leave them commented. Uncommented options override the
# default value.

# If you want to change the port on a SELinux system, you have to tell
# SELinux about this change.
# semanage port -a -t ssh_port_t -p tcp #PORTNUMBER
#
Port 22
AddressFamily any
ListenAddress 0.0.0.0
#ListenAddress ::

# The default requires explicit activation of protocol 1
#Protocol 2

# HostKey for protocol version 1
#HostKey /etc/ssh/ssh_host_key
# HostKeys for protocol version 2
HostKey /etc/ssh/ssh_host_rsa_key
#HostKey /etc/ssh/ssh_host_dsa_key
HostKey /etc/ssh/ssh_host_ecdsa_key
HostKey /etc/ssh/ssh_host_ed25519_key

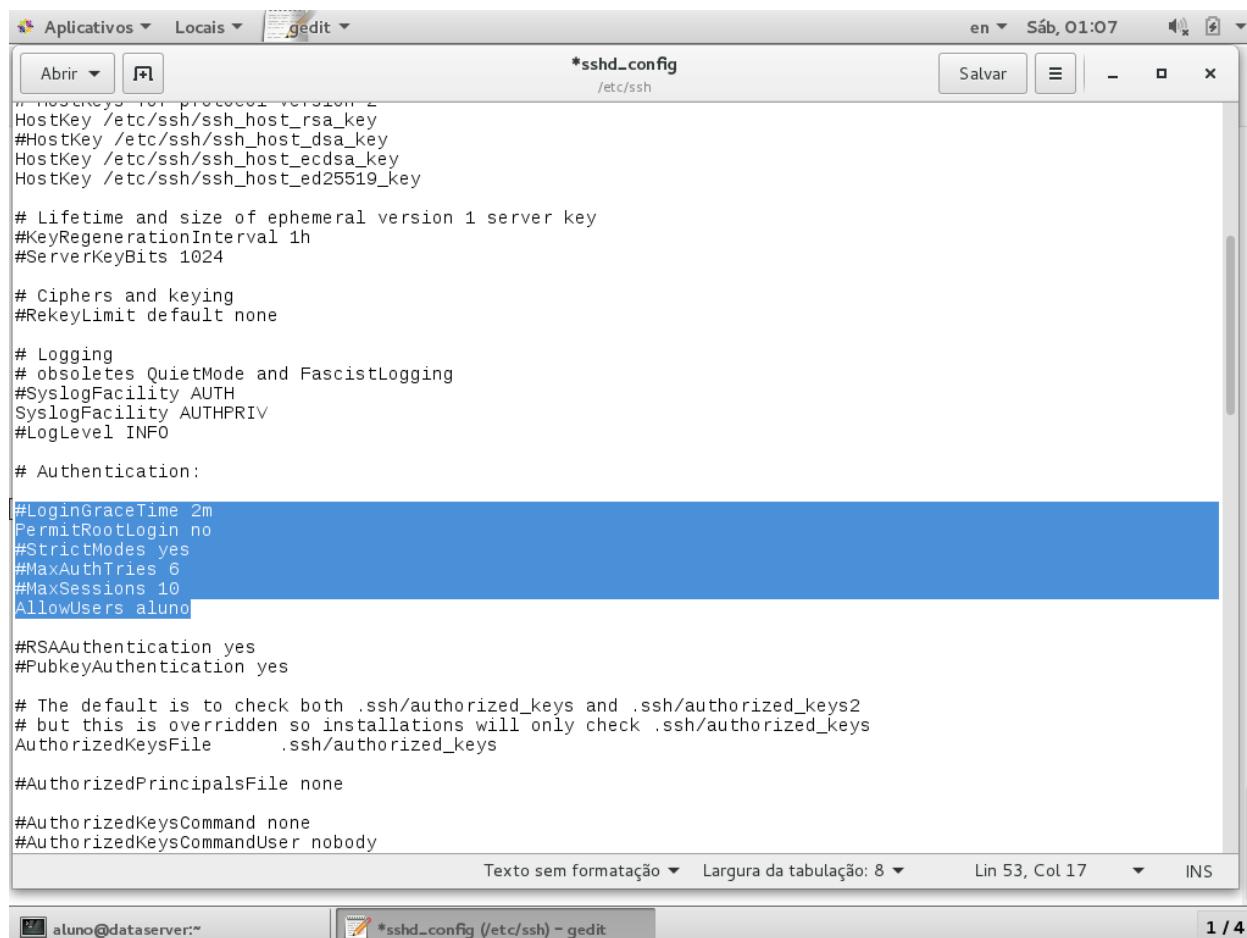

# Lifetime and size of ephemeral version 1 server key
#KeyRegenerationInterval 1h
#ServerKeyBits 1024

# Ciphers and keying
#RekeyLimit default none
```

Primeira parte da configuração ssh.

Remova o símbolo (#) de comentário das 3 linhas marcadas acima.

Instalação e Configuração do Ecossistema Hadoop

The screenshot shows a terminal window titled "aluno@dataserver:~" running the gedit text editor. The file being edited is "/etc/ssh/sshd_config". The configuration file contains several sections of SSH server settings, including host keys, cipher lifetime, logging, authentication methods, and authorized keys. A blue rectangular highlight covers the section starting with "# Authentication:" and ending with "#AuthorizedPrincipalsFile none". The status bar at the bottom of the gedit window displays "Texto sem formatação" (Text without formatting), "Largura da tabulação: 8", "Lin 53, Col 17", and "INS". The terminal prompt shows the user "aluno" is connected to the host "dataserver".

```
*sshd_config
/etc/ssh
HostKey /etc/ssh/ssh_host_rsa_key
#HostKey /etc/ssh/ssh_host_dsa_key
HostKey /etc/ssh/ssh_host_ecdsa_key
HostKey /etc/ssh/ssh_host_ed25519_key

# Lifetime and size of ephemeral version 1 server key
#KeyRegenerationInterval 1h
#ServerKeyBits 1024

# Ciphers and keying
#RekeyLimit default none

# Logging
# obsoletes QuietMode and FascistLogging
#SyslogFacility AUTH
SyslogFacility AUTHPRIV
#LogLevel INFO

# Authentication:

#LoginGraceTime 2m
PermitRootLogin no
#StrictModes yes
#MaxAuthTries 6
#MaxSessions 10
AllowUsers aluno

#RSAAuthentication yes
#PubkeyAuthentication yes

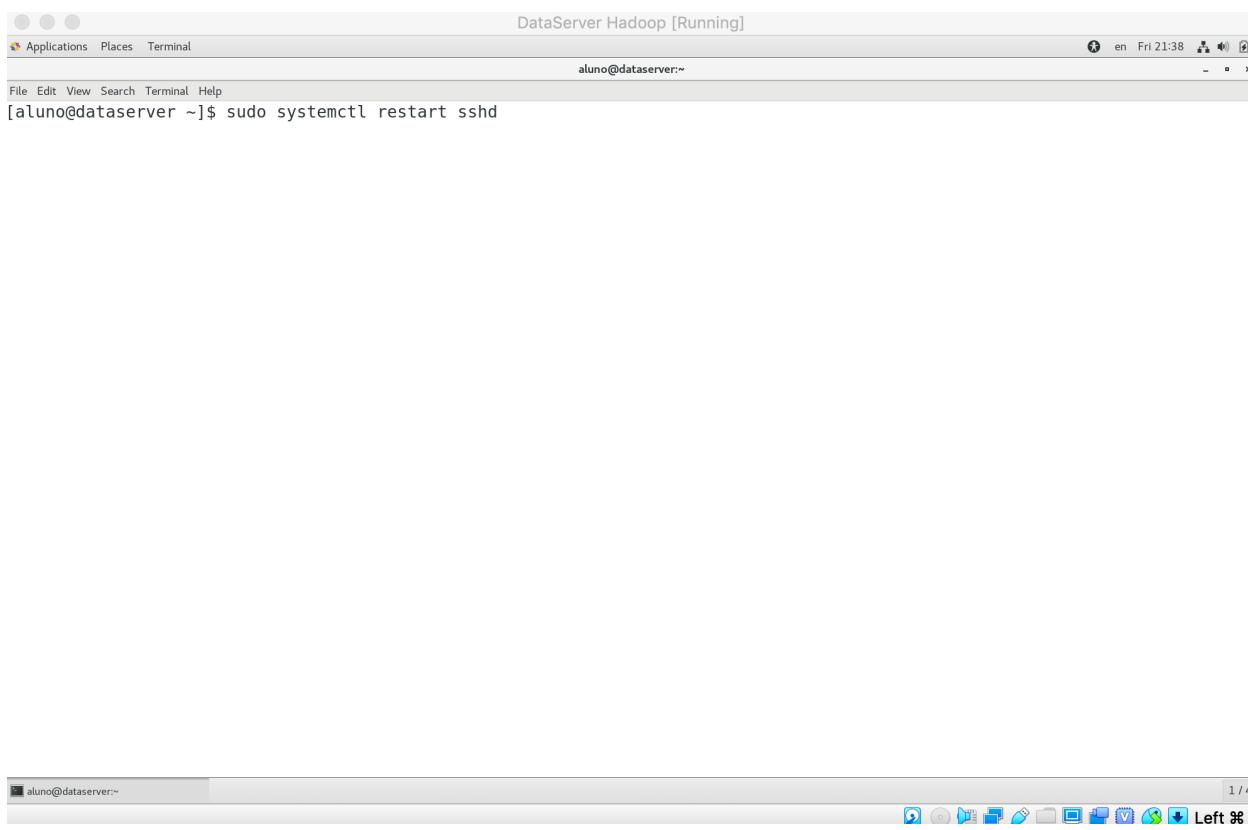

# The default is to check both .ssh/authorized_keys and .ssh/authorized_keys2
# but this is overridden so installations will only check .ssh/authorized_keys
AuthorizedKeysFile      .ssh/authorized_keys

#AuthorizedPrincipalsFile none

#AuthorizedKeysCommand none
#AuthorizedKeysCommandUser nobody
```

Segunda parte da configuração do ssh

Instalação e Configuração do Ecossistema Hadoop

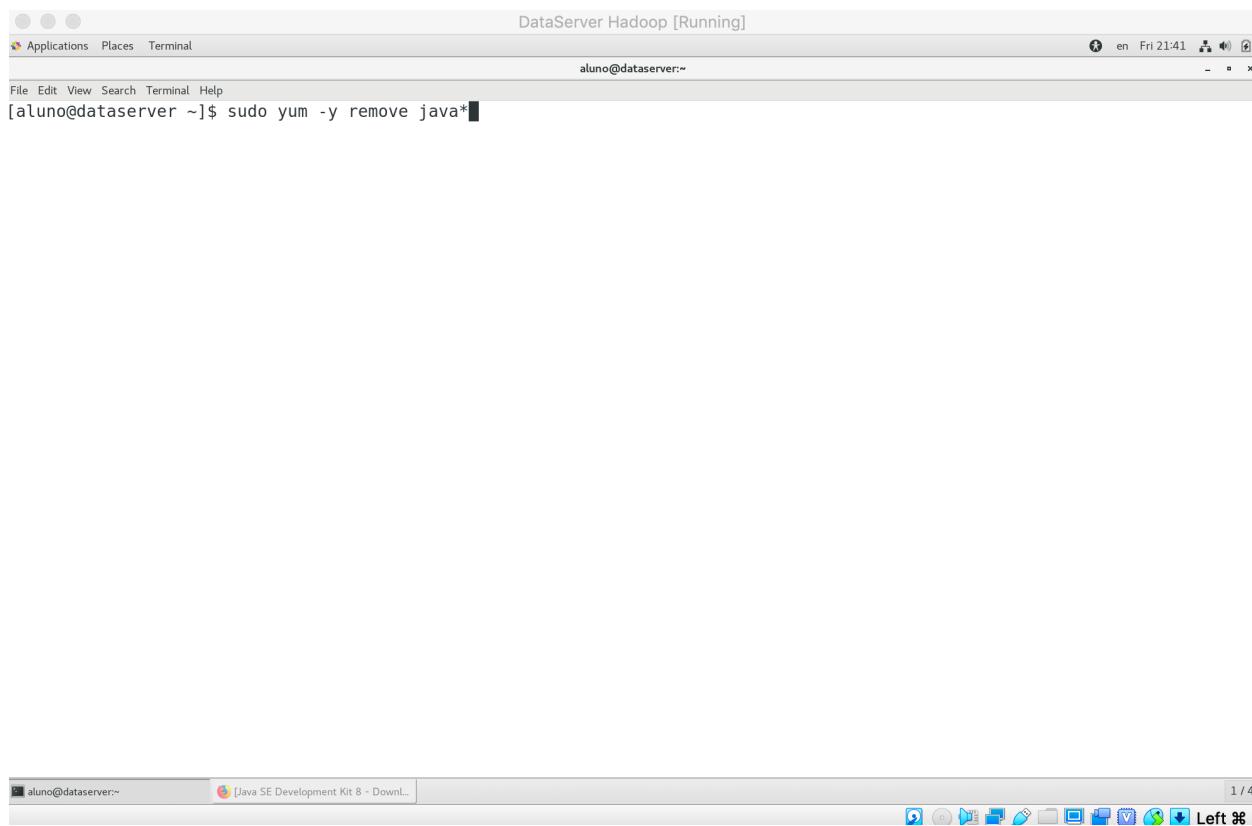

The screenshot shows a terminal window titled "DataServer Hadoop [Running]". The window has a standard Linux desktop interface with icons for Applications, Places, and Terminal at the top. The status bar at the bottom right shows the date and time as "Fri 21:38". The terminal itself has a light gray background and a dark gray border. It displays the command "[aluno@dataserver ~]\$ sudo systemctl restart sshd" in white text. The window title bar also contains the user name "aluno" and the host name "dataserver".

```
[aluno@dataserver ~]$ sudo systemctl restart sshd
```

sudo systemctl restart sshd

Instalação e Configuração do Ecossistema Hadoop

A screenshot of a Linux terminal window titled "Terminal". The window has a menu bar with "Aplicativos", "Locais", and "Terminal". The status bar shows "en Ter, 03:34". The terminal prompt is "aluno@dataserver:~". The user has typed the command "[aluno@dataserver ~]\$ source .bashrc" and pressed Enter. The window title bar also displays "Terminal". The bottom status bar shows "aluno@dataserver:~" and "1 / 4".

```
aluno@dataserver:~$ source .bashrc
```

Instalação e Configuração do Ecossistema Hadoop

```
[aluno@dataserver ~]$ java -version
java version "1.8.0_212"
Java(TM) SE Runtime Environment (build 1.8.0_212-b10)
Java HotSpot(TM) 64-Bit Server VM (build 25.212-b10, mixed mode)
[aluno@dataserver ~]$
```

Checando a versão do Java JDK

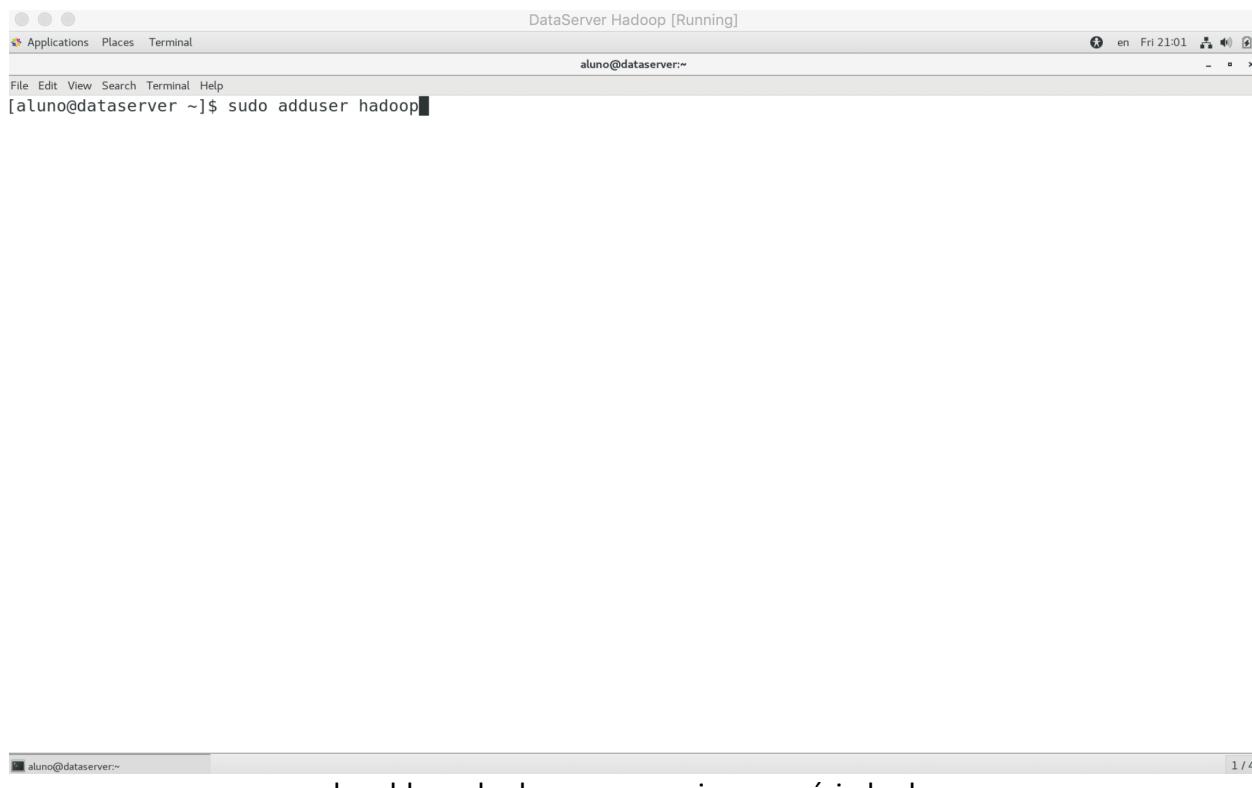

Segundo checkpoint:

Desligue a VM (clique no ícone da bateria e então em desligar).
Clique no menu File do VirtualBox e clique em Export Appliance.
Será gerada uma cópia de segurança da sua máquina virtual.

→ VM: **DataServer-Hadoop-v2.0.ova**

5. Instalação e Configuração do Hadoop

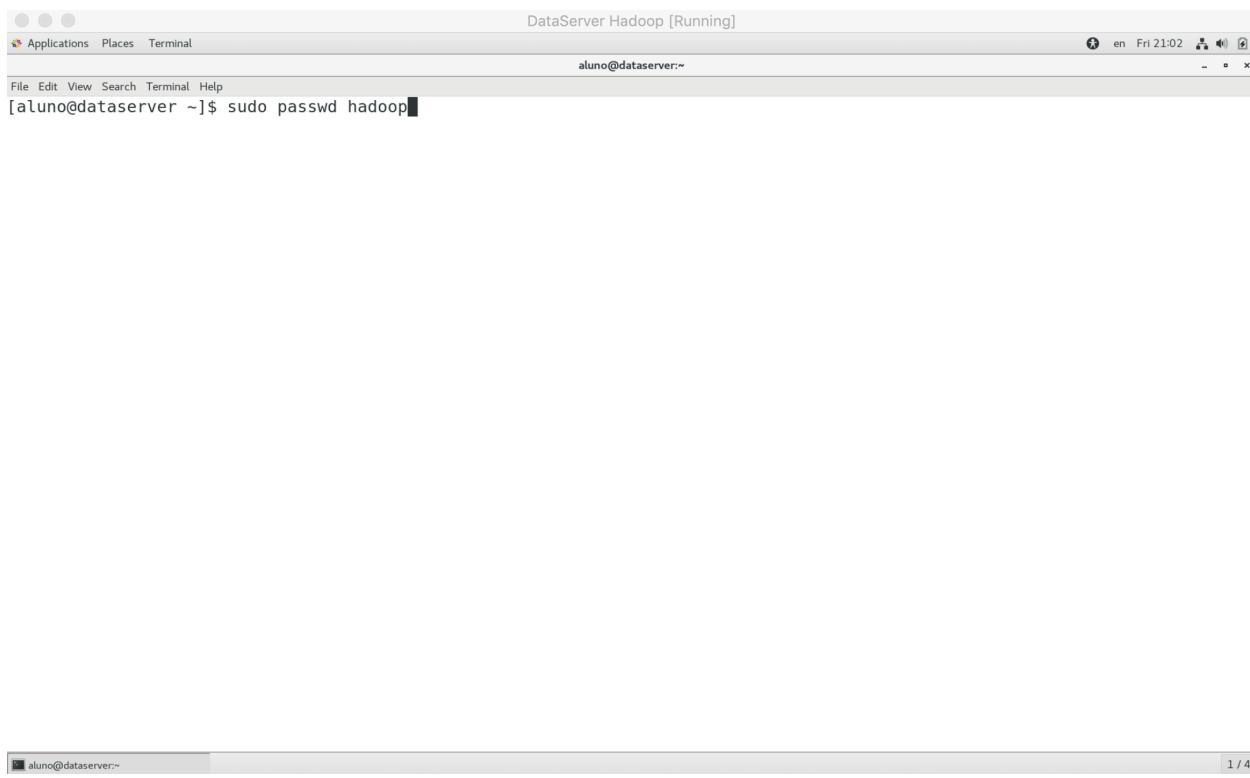

5.1. Criando o usuário hadoop

```
aluno@dataserver:~$ sudo adduser hadoop
```

sudo adduser hadoop – para criar o usuário hadoop

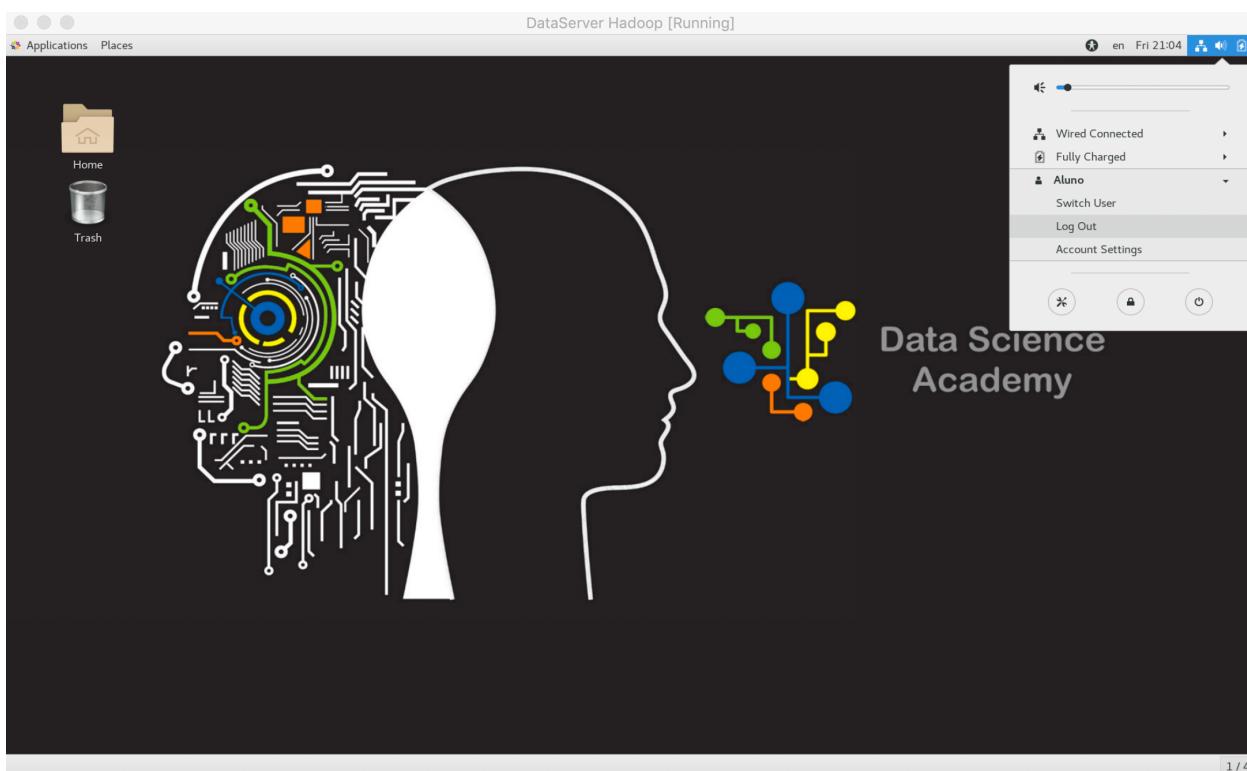

Instalação e Configuração do Ecossistema Hadoop

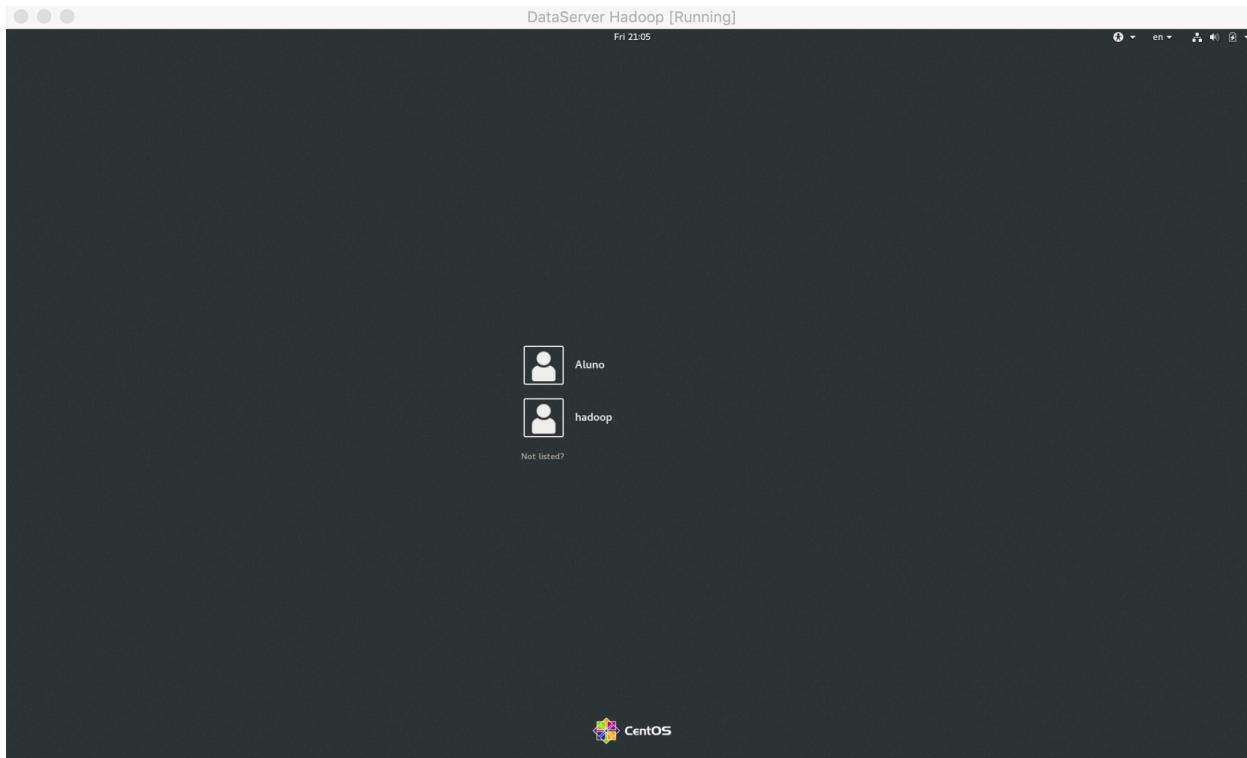

The screenshot shows a terminal window titled "DataServer Hadoop [Running]" with the user "aluno@dataserver:~". The command "[aluno@dataserver ~]\$ sudo passwd hadoop" is visible at the bottom of the terminal window.

sudo passwd hadoop – para definir a senha do usuário hadoop (dsahadoop**)**

Instalação e Configuração do Ecossistema Hadoop

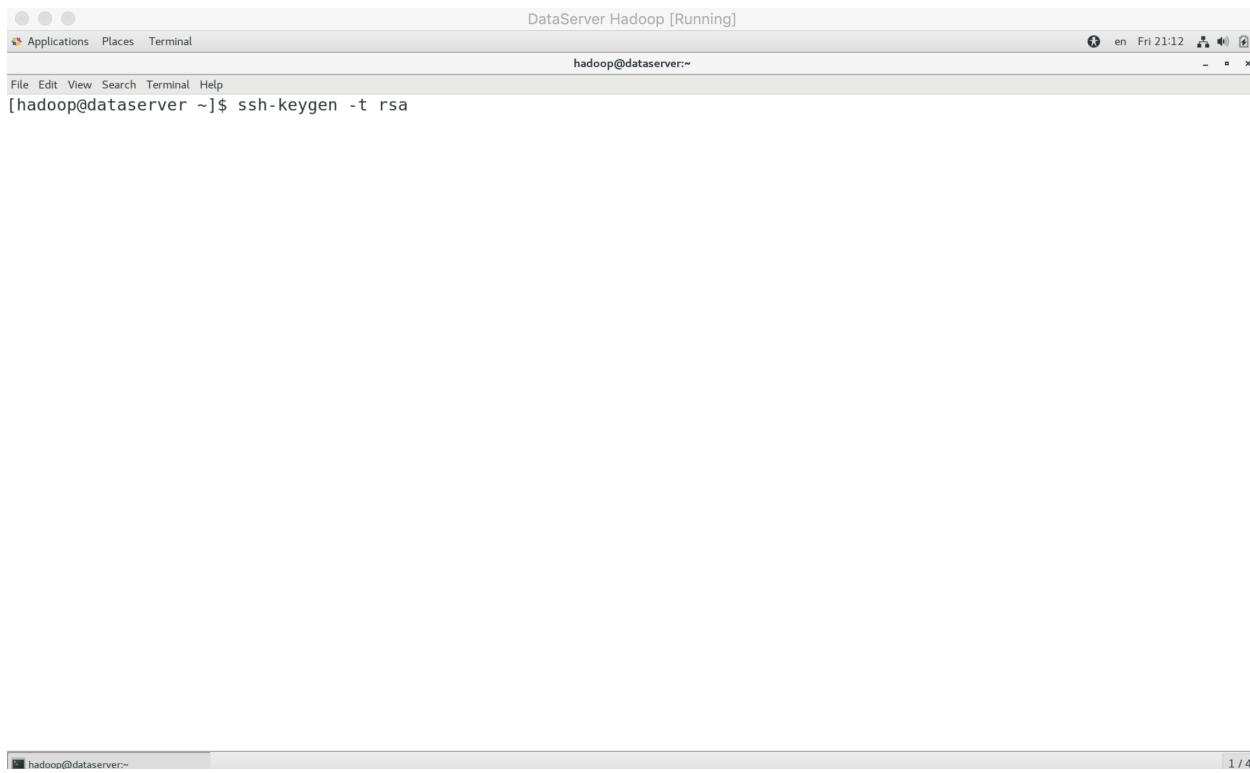

Efetue logout como usuário aluno

E efetue login como usuário hadoop

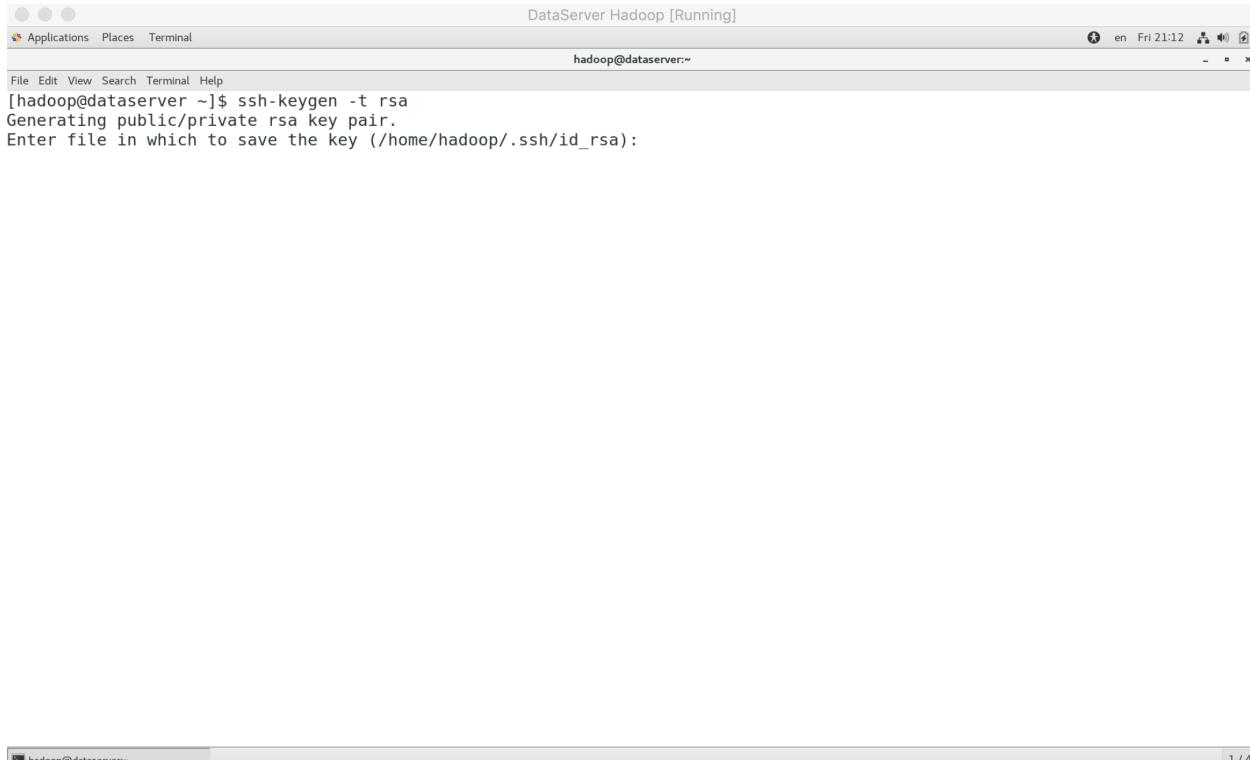

Adicione o usuário hadoop no arquivo /etc/sudoers conforme você fez com o usuário aluno

5.2. Configuração do ssh sem senha

```
DataServer Hadoop [Running]
Applications Places Terminal
hadoop@dataserver:~ 
File Edit View Search Terminal Help
[hadoop@dataserver ~]$ ssh-keygen -t rsa
```

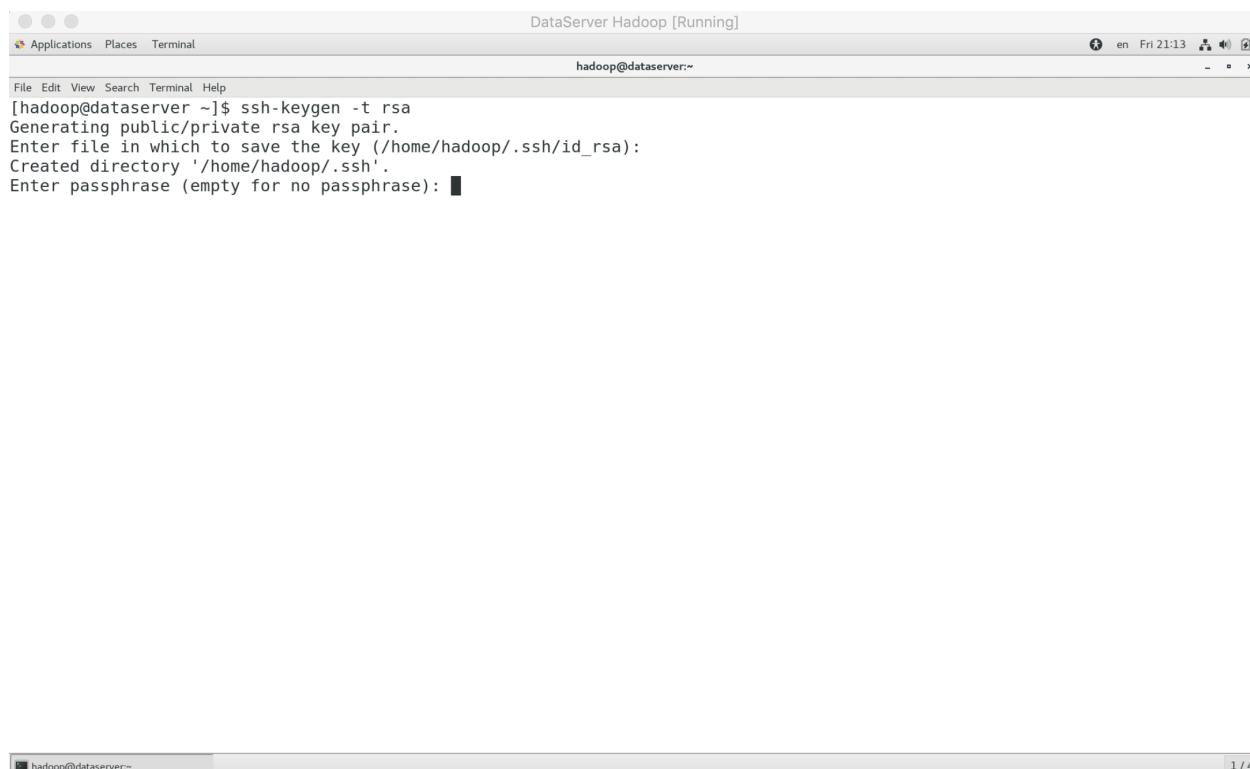

ssh-keygen -t rsa

```
DataServer Hadoop [Running]
Applications Places Terminal
hadoop@dataserver:~ 
File Edit View Search Terminal Help
[hadoop@dataserver ~]$ ssh-keygen -t rsa
Generating public/private rsa key pair.
Enter file in which to save the key (/home/hadoop/.ssh/id_rsa):
```

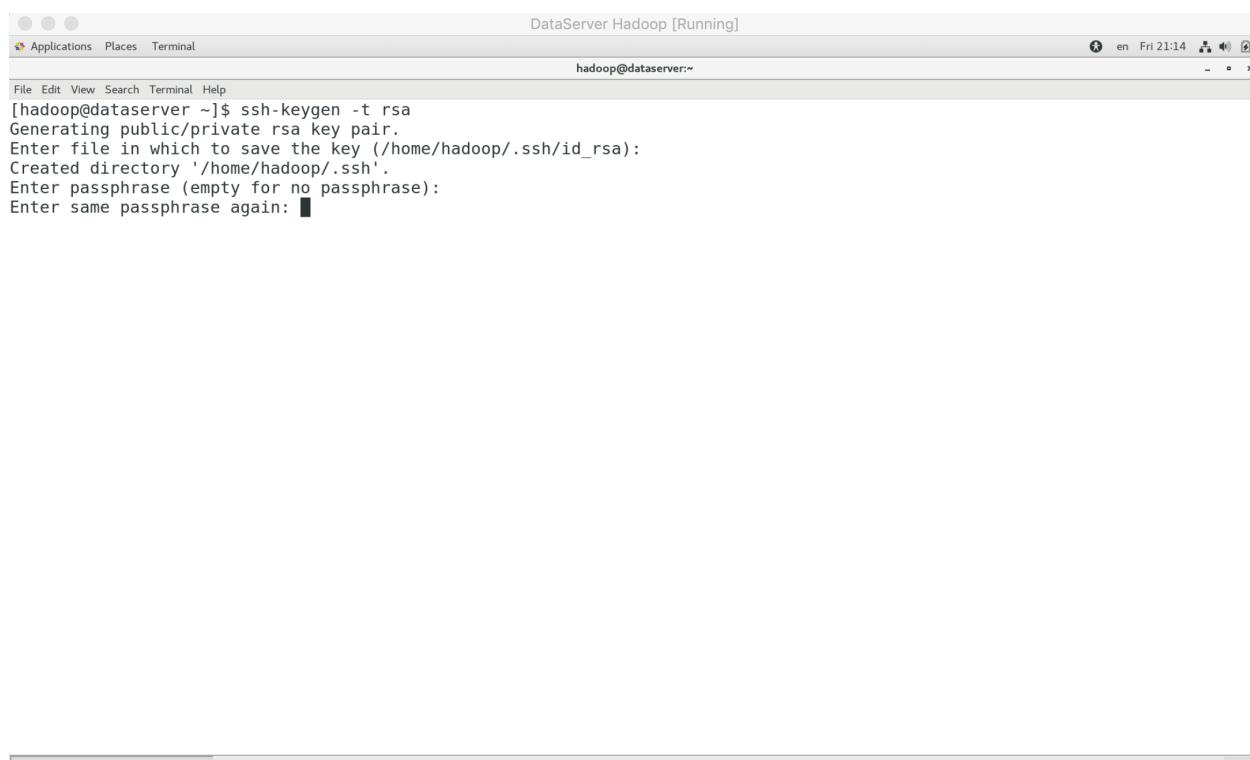

Pressionar Enter para confirmar o diretório onde as chaves serão geradas

Instalação e Configuração do Ecossistema Hadoop

```
[hadoop@dataserver ~]$ ssh-keygen -t rsa
Generating public/private rsa key pair.
Enter file in which to save the key (/home/hadoop/.ssh/id_rsa):
Created directory '/home/hadoop/.ssh'.
Enter passphrase (empty for no passphrase):
```

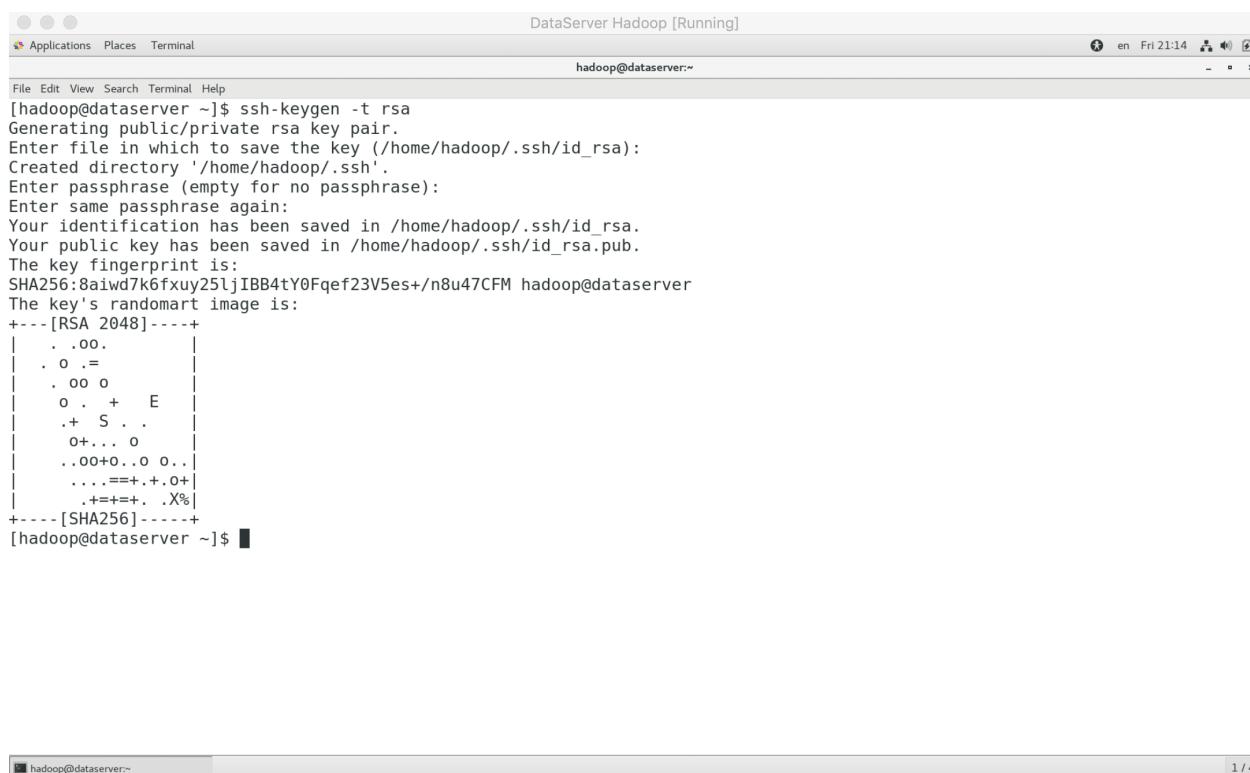

Pressionar Enter

```
[hadoop@dataserver ~]$ ssh-keygen -t rsa
Generating public/private rsa key pair.
Enter file in which to save the key (/home/hadoop/.ssh/id_rsa):
Created directory '/home/hadoop/.ssh'.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
```

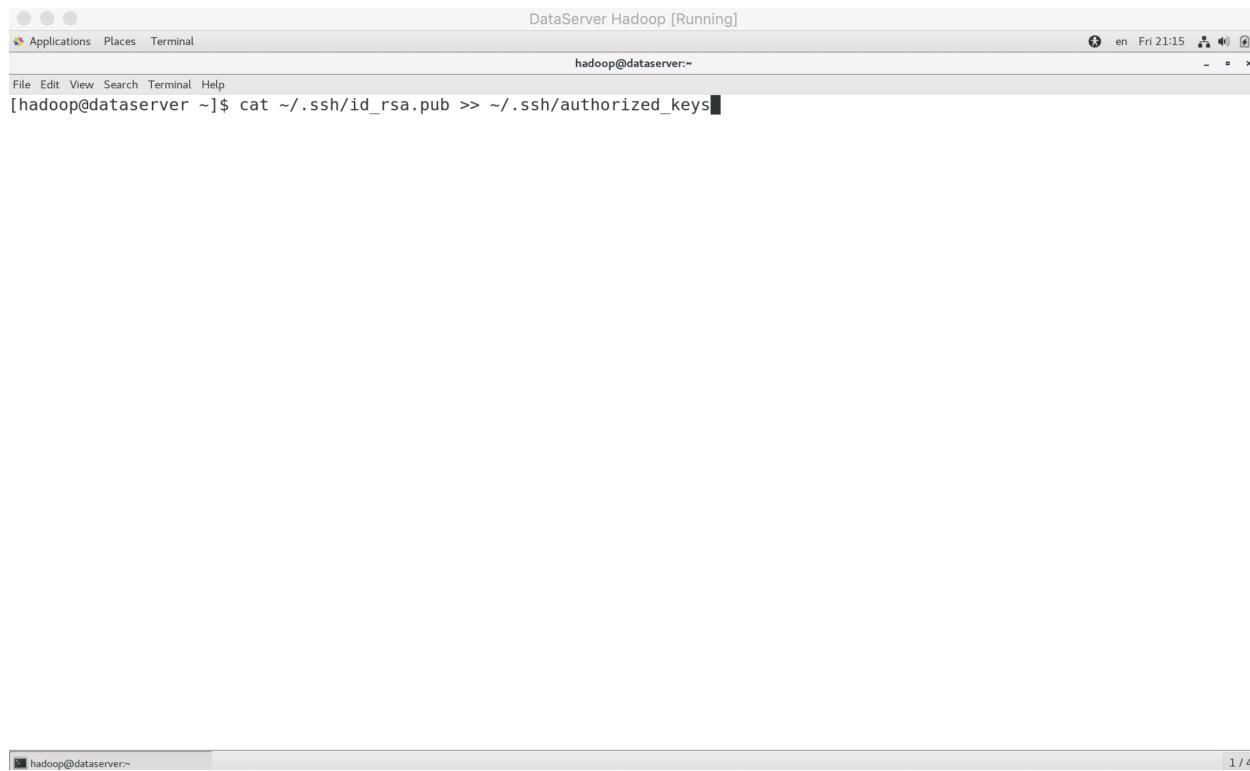

Pressionar Enter novamente

Instalação e Configuração do Ecossistema Hadoop

```
[hadoop@dataserver ~]$ ssh-keygen -t rsa
Generating public/private rsa key pair.
Enter file in which to save the key (/home/hadoop/.ssh/id_rsa):
Created directory '/home/hadoop/.ssh'.
Enter passphrase (empty for no passphrase):
Enter same passphrase again:
Your identification has been saved in /home/hadoop/.ssh/id_rsa.
Your public key has been saved in /home/hadoop/.ssh/id_rsa.pub.
The key fingerprint is:
SHA256:8aiwd7k6fxuy25ljIBB4tY0Fqef23V5es+/n8u47CFM hadoop@dataserver
The key's randomart image is:
+---[RSA 2048]----+
| . .oo.
| . o .=
| . oo o
| o . + E
| .+ S . .
| o+... o
| ..oo+o..o...
| ....==+.+o+
| .+=+=+. .X%
+---[SHA256]----+
[hadoop@dataserver ~]$
```

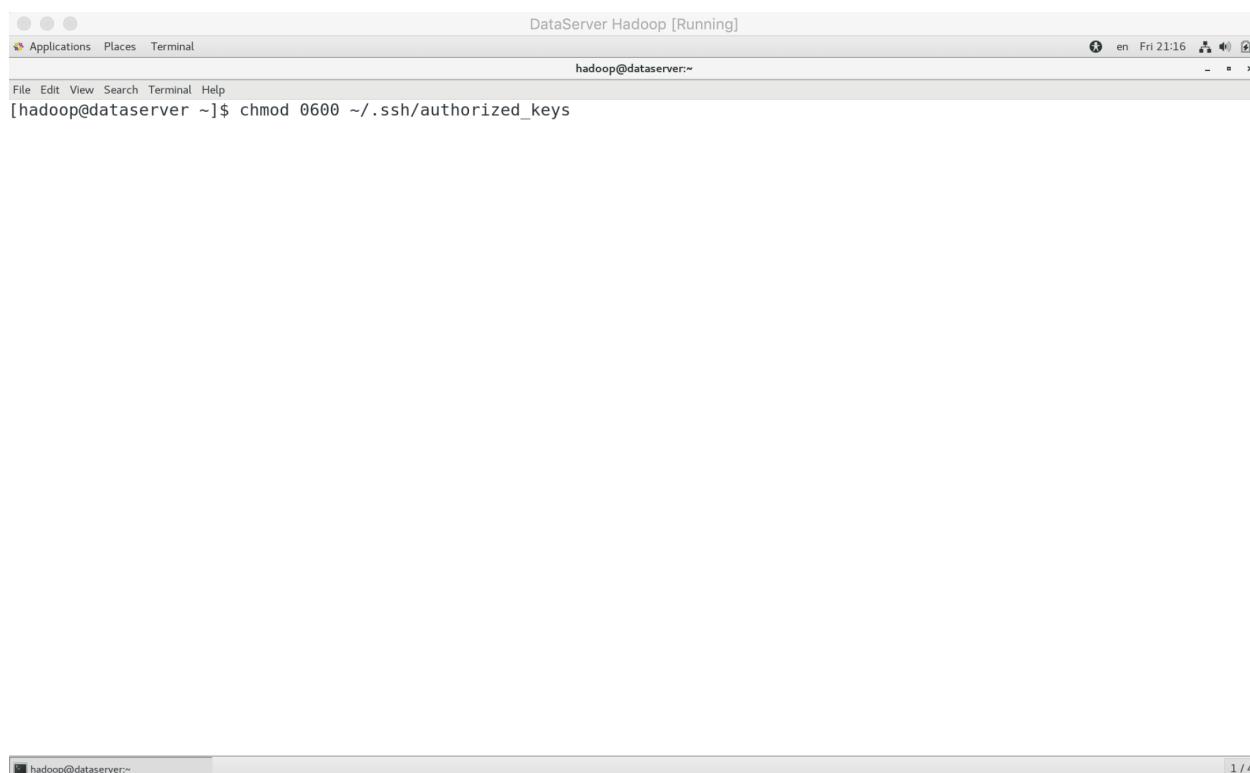

Chaves de segurança geradas

```
[hadoop@dataserver ~]$ cat ~/.ssh/id_rsa.pub >> ~/.ssh/authorized_keys
```

`cat ~/.ssh/id_rsa.pub >> ~/.ssh/authorized_keys`
 Esse comando cópia a chave pública para o arquivo authorized_keys do ssh

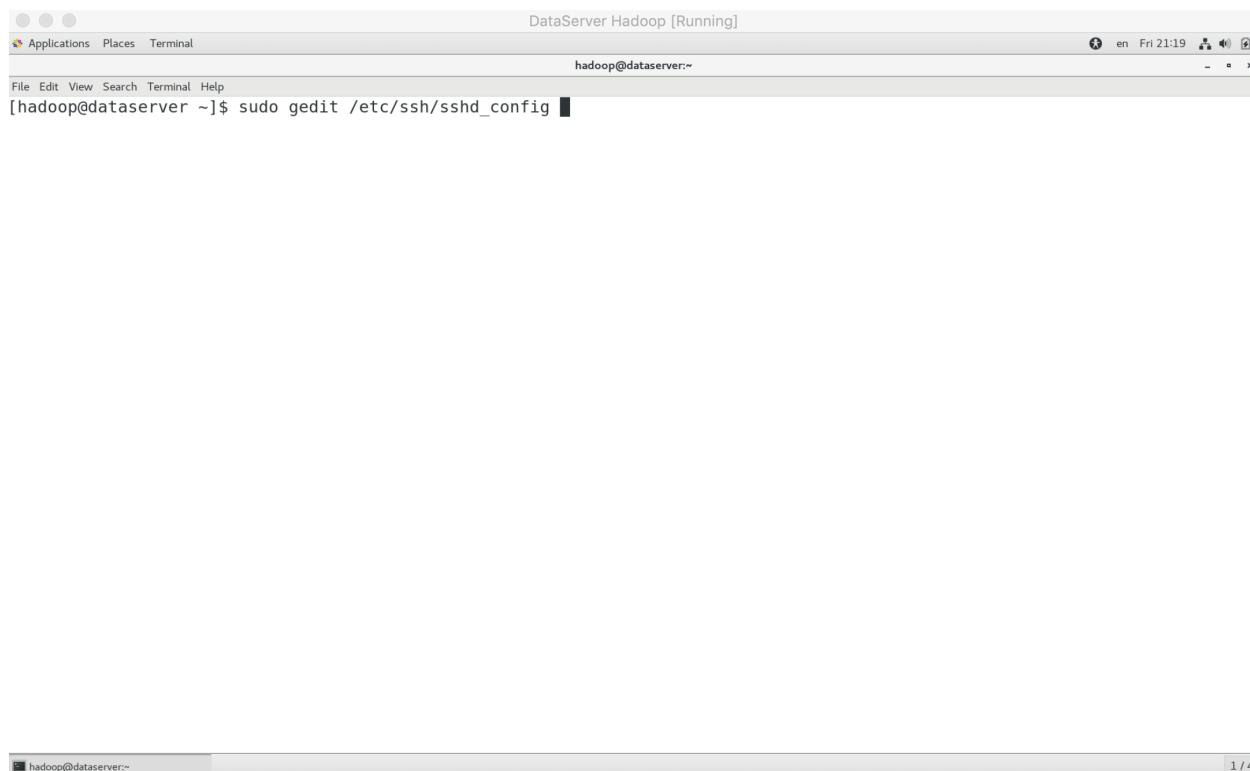

Instalação e Configuração do Ecossistema Hadoop

```
[hadoop@dataserver ~]$ chmod 0600 ~/.ssh/authorized_keys
```

chmod 0600 ~/.ssh/authorized_keys

Esse comando define a permissão do arquivo authorized_keys

```
[hadoop@dataserver ~]$ sudo gedit /etc/ssh/sshd_config
```

sudo gedit /etc/ssh/sshd_config

Edite o arquivo de configuração do ssh

Instalação e Configuração do Ecossistema Hadoop

Screenshot of a terminal window titled "DataServer Hadoop [Running]". The window shows the contents of the file "/etc/ssh/sshd_config". The configuration file includes various SSH settings such as port 22, host keys, ciphers, logging, authentication methods, and user permissions. A specific line "AllowUsers aluno hadoop" is highlighted in blue.

```

# This sshd was compiled with PATH=/usr/local/bin:/usr/bin

# The strategy used for options in the default sshd_config shipped with
# OpenSSH is to specify options with their default value where
# possible, but leave them commented. Uncommented options override the
# default value.

# If you want to change the port on a SELinux system, you have to tell
# SELinux about this change.
# semanage port -a -t ssh_port_t -p tcp #PORTNUMBER
#
Port 22
AddressFamily any

127.0.0.1 dataservert
```

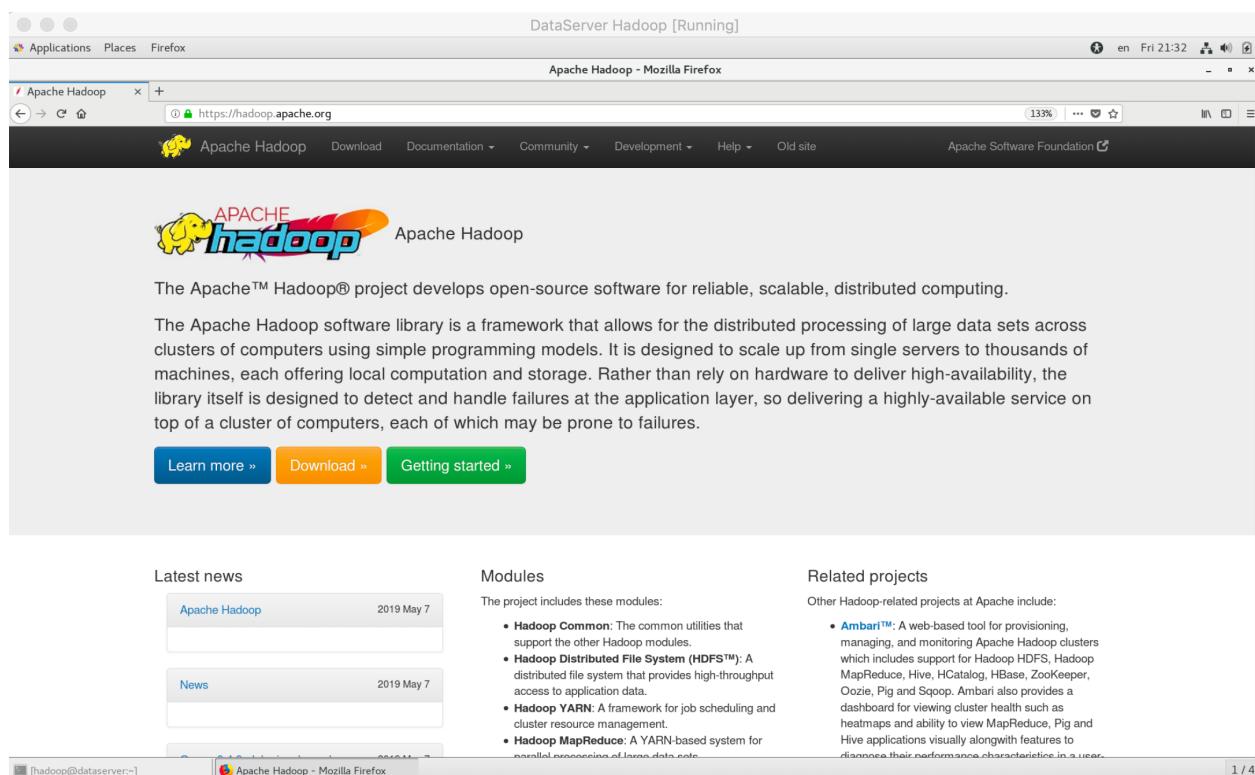

```
hosts (/etc) - gedit  
aluno@dataservert:~
```

Incluir a última linha conforme acima

Instalação e Configuração do Ecossistema Hadoop

5.3.2. Download do Hadoop

The Apache™ Hadoop® project develops open-source software for reliable, scalable, distributed computing.

The Apache Hadoop software library is a framework that allows for the distributed processing of large data sets across clusters of computers using simple programming models. It is designed to scale up from single servers to thousands of machines, each offering local computation and storage. Rather than rely on hardware to deliver high-availability, the library itself is designed to detect and handle failures at the application layer, so delivering a highly-available service on top of a cluster of computers, each of which may be prone to failures.

[Learn more >](#) [Download >](#) [Getting started >](#)

Latest news

- Apache Hadoop 2019 May 7
- News 2019 May 7

Modules

The project includes these modules:

- **Hadoop Common:** The common utilities that support the other Hadoop modules.
- **Hadoop Distributed File System (HDFS™):** A distributed file system that provides high-throughput access to application data.
- **Hadoop YARN:** A framework for job scheduling and cluster resource management.
- **Hadoop MapReduce:** A YARN-based system for parallel processing of large data sets.

Related projects

Other Hadoop-related projects at Apache include:

- **Ambari™:** A web-based tool for provisioning, managing, and monitoring Apache Hadoop clusters which includes support for Hadoop HDFS, Hadoop MapReduce, Hive, HCatalog, HBase, ZooKeeper, Oozie, Pig and Sqoop. Ambari also provides a dashboard for viewing cluster health such as heatmaps and ability to view MapReduce, Pig and Hive applications visually alongwith features to diagnose their performance characteristics in a user.

Instalação e Configuração do Ecossistema Hadoop

Download

Hadoop is released as source code tarballs with corresponding binary tarballs for convenience. The downloads are distributed via mirror sites and should be checked for tampering using GPG or SHA-256.

Version	Release date	Source download	Binary download	Release notes
3.1.2	2019 Feb 6	source (checksum signature)	binary (checksum signature)	Announcement
3.2.0	2019 Jan 16	source (checksum signature)	binary (checksum signature)	Announcement
2.9.2	2018 Nov 19	source (checksum signature)	binary (checksum signature)	Announcement
2.8.5	2018 Sep 15	source (checksum signature)	binary (checksum signature)	Announcement
2.7.7	2018 May 31	source (checksum signature)	binary (checksum signature)	Announcement

To verify Hadoop releases using GPG:

1. Download the release hadoop-X.Y.Z-src.tar.gz from a [mirror site](#).
2. Download the signature file hadoop-X.Y.Z-src.tar.gz.asc from [Apache](#).
3. Download the Hadoop KEYS file.
4. gpg --import KEYS
5. gpg --verify hadoop-X.Y.Z-src.tar.gz.asc

To perform a quick check using SHA-256:

1. Download the release hadoop-X.Y.Z-src.tar.gz from a [mirror site](#).
2. Download the checksum hadoop-X.Y.Z-src.tar.gz.mds from [Apache](#).
3. shasum -a 256 hadoop-X.Y.Z-src.tar.gz

All previous releases of Hadoop are available from the [Apache release archive](#) site.

Many third parties distribute products that include Apache Hadoop and related tools. Some of these are listed on the [Distributions wiki page](#).

The main header 'Bem vindo – Portal Brasileiro de Dados Abertos – Mozilla Firefox' is displayed above the site's logo 'dados.gov.br'. The page features a green header with the text 'BRASIL' and 'Acesso à informação'. Below the header, there are links for 'Ir para o conteúdo', 'Ir para o menu', 'Ir para a busca', and 'Ir para o rodapé'. The main content area has a green background with the 'dados.gov.br' logo and the text 'PORTAL BRASILEIRO DE DADOS ABERTOS'. A search bar with placeholder 'Pesquisa ...' and a 'PESQUISAR' button is present. Below the search bar, a message states 'em 1068 conjuntos de dados com 8685 recursos (o que é isto?)'. A section titled 'Dados em destaque' contains two items: 'Compras públicas do governo federal' (with a link to 'http://www.siasg.mct.es.gov.br') and 'Ocorrências Aeronáuticas na Aviação Civil Brasileira' (with a link to 'http://www.cenipa.mct.es.gov.br'). Another section titled 'Lista de Eleitores Filiados aos Partidos Políticos' also includes a link to 'http://www.justicaeleitoral.jus.br/arquivos'. To the right, a sidebar titled 'Publicações mais recentes' lists five datasets with their authors and publication dates:

Conjunto de dados	Autor	Quando
Aeroporto - 1º Balanço do PAC 2015	Sem Responsável	25 Jan
Cidades Digitais - 1º Balanço do PAC 2015	Sem Responsável	25 Jan
Centro de Iniciação ao Esporte - 1º ...	Sem Responsável	25 Jan
Base Cartográfica Contínua do Brasil – ...	Diretoria de ...	15 Dez
REGIÃO DE INFORMAÇÃO DE VOO - FIR	Divisão de Operações	15 Dez

Instalação e Configuração do Ecossistema Hadoop

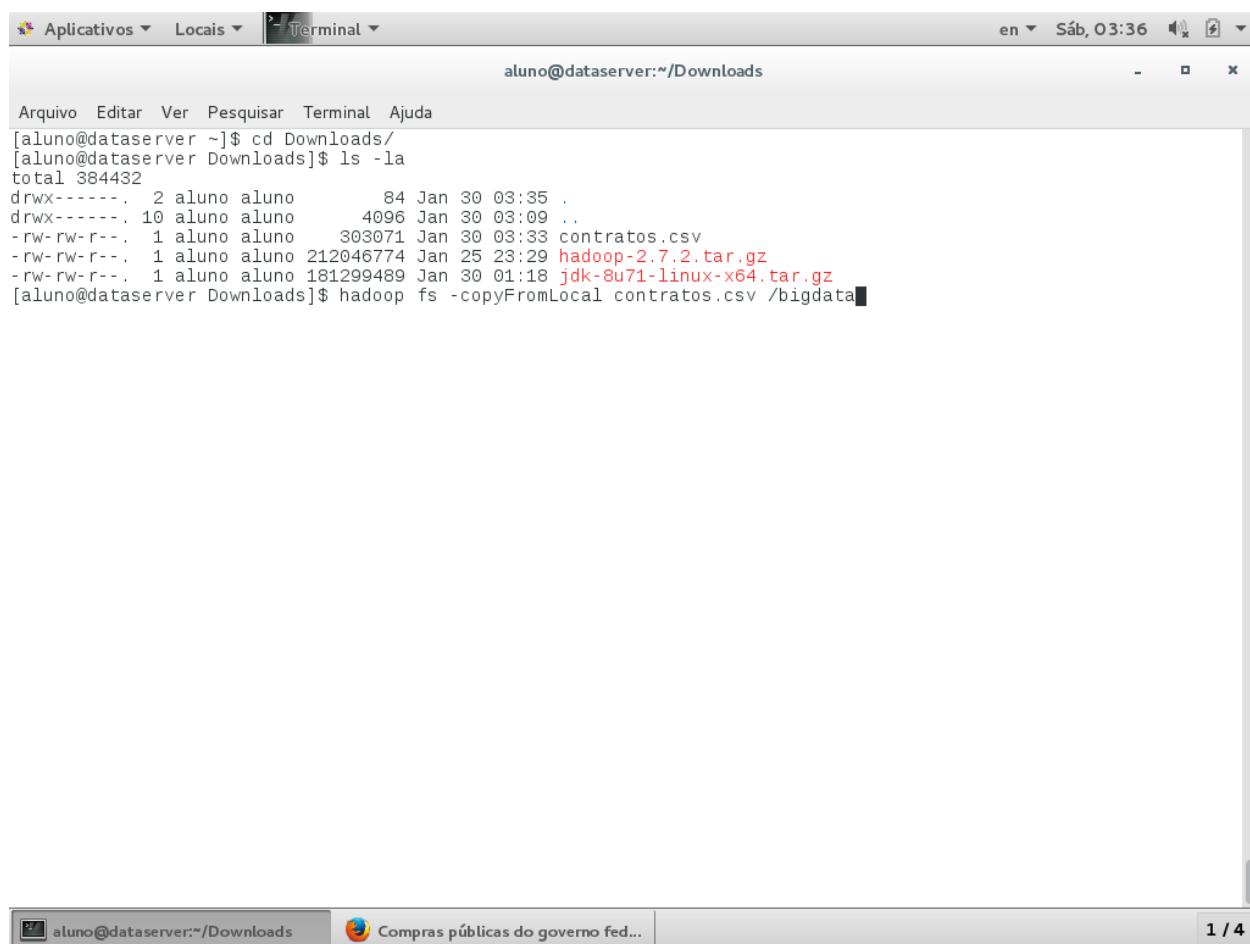

The screenshot shows a list of datasets from the 'Compras públicas do governo federal' dataset on the 'Portal Brasileiro de Dados Abertos'. The datasets listed are:

- Materiais em JSON
- Serviços em JSON
- Contratos em CSV
- Fornecedores em CSV
- Licitações em CSV
- Materiais em CSV
- Serviços em CSV
- Tipos de Contrato em HTML
- Tipos de Contrato em XML
- Tipos de Contrato em JSON
- Tipos de Contrato em CSV

A context menu is open over the 'Tipos de Contrato em CSV' entry, showing options: 'Pré-visualização' and 'Baixar'.

Baixar o arquivo de contratos em formato csv (pode ser qualquer um)

```

A instalação do Hadoop possui um job chamado wordcount, que pode ser usado como exemplo para processamento de Big Data. Basicamente, o job conta a ocorrência de cada palavra no arquivo. Vamos executar com o comando acima (a versão do arquivo .jar é a mesma versão do Hadoop que você instalou).

Instalação e Configuração do Ecossistema Hadoop

The screenshot shows a terminal window titled "Terminal" with the command prompt "aluno@dataserver:/opt/hadoop". The user has run the command "hadoop jar share/hadoop/mapreduce/hadoop-mapreduce-examples-2.7.2.jar wordcount /bigdata/contratos.csv /output". The terminal displays the log output of the Hadoop job, which includes information about connecting to the ResourceManager, submitting tokens for the job, and tracking the progress of the map and reduce tasks.

6. Instalação e Configuração do Zookeeper

6.1. Download e Instalação do Zookeeper

The Apache ZooKeeper system for distributed coordination is a high-performance service for building distributed applications.

- [Download](#)
- [Release Notes](#)
- [News](#)

Download

Releases may be downloaded from Apache mirrors: [Download](#)

On the mirror, all recent releases are available, but are not guaranteed to be stable. For stable releases, look in the stable directory.

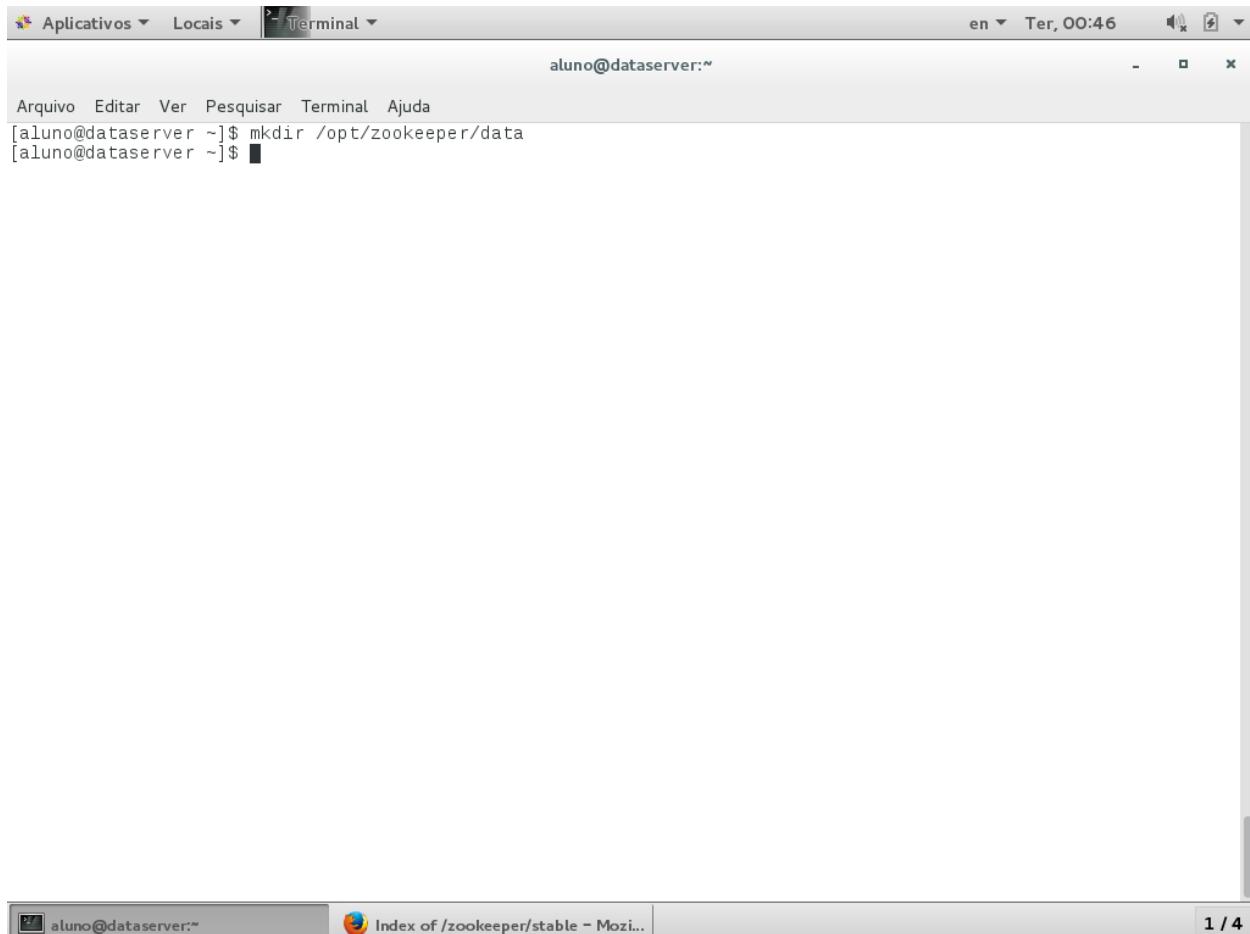

You can verify the integrity of a downloaded release using the PGP signatures and hashes (MD5 or SHA1) hosted at the main [Apache distro site](#). For additional information, refer to the Apache documentation for [verifying the integrity of Apache project releases](#).

Release Notes

Download do Zookeeper – Versão 3.5.5

Faça o download, descompacte o arquivo e mova o diretório para /opt/zookeeper da mesma forma como você fez com o Java JDK e com o Hadoop.

6.2. Configurando do Zookeeper

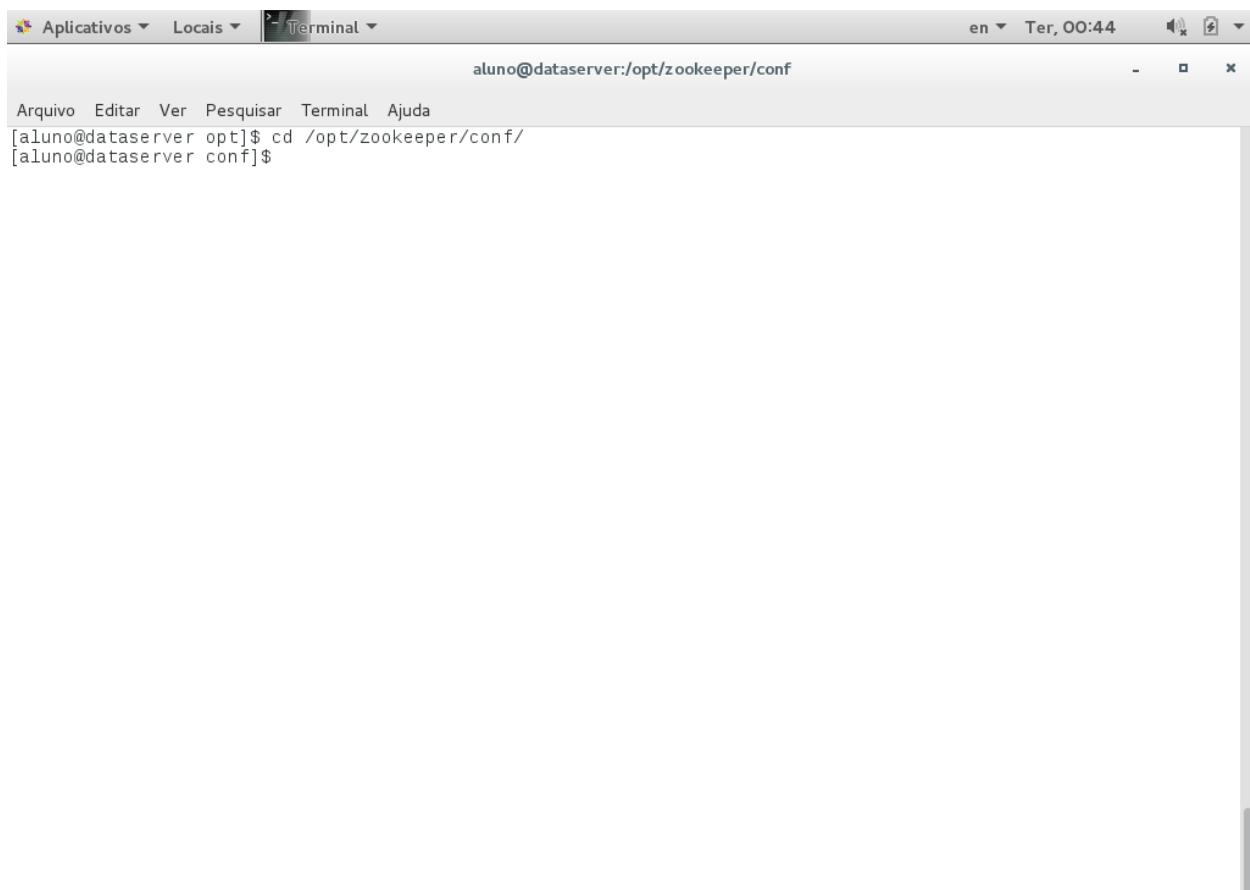

A screenshot of a Linux desktop environment. At the top, there is a menu bar with "Aplicativos", "Locais", and "Terminal". The terminal window is open and shows the command: [aluno@dataserver ~]\$ mkdir /opt/zookeeper/data [aluno@dataserver ~]\$. Below the terminal, a browser window is open to "Index of /zookeeper/stable - Mozilla...". The status bar at the bottom indicates "1 / 4".

```
aluno@dataserver:~$ mkdir /opt/zookeeper/data
```

Criar o diretório **data** dentro de /opt/zookeeper

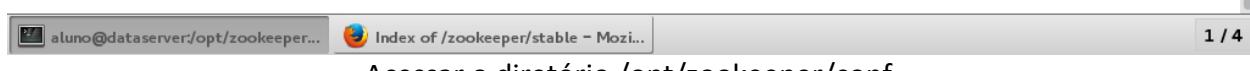

Instalação e Configuração do Ecossistema Hadoop

aluno@dataserver:/opt/zookeeper/conf

Arquivo Editar Ver Pesquisar Terminal Ajuda

```
[aluno@dataserver opt]$ cd /opt/zookeeper/conf/
[aluno@dataserver conf]$
```

Acessar o diretório /opt/zookeeper/conf

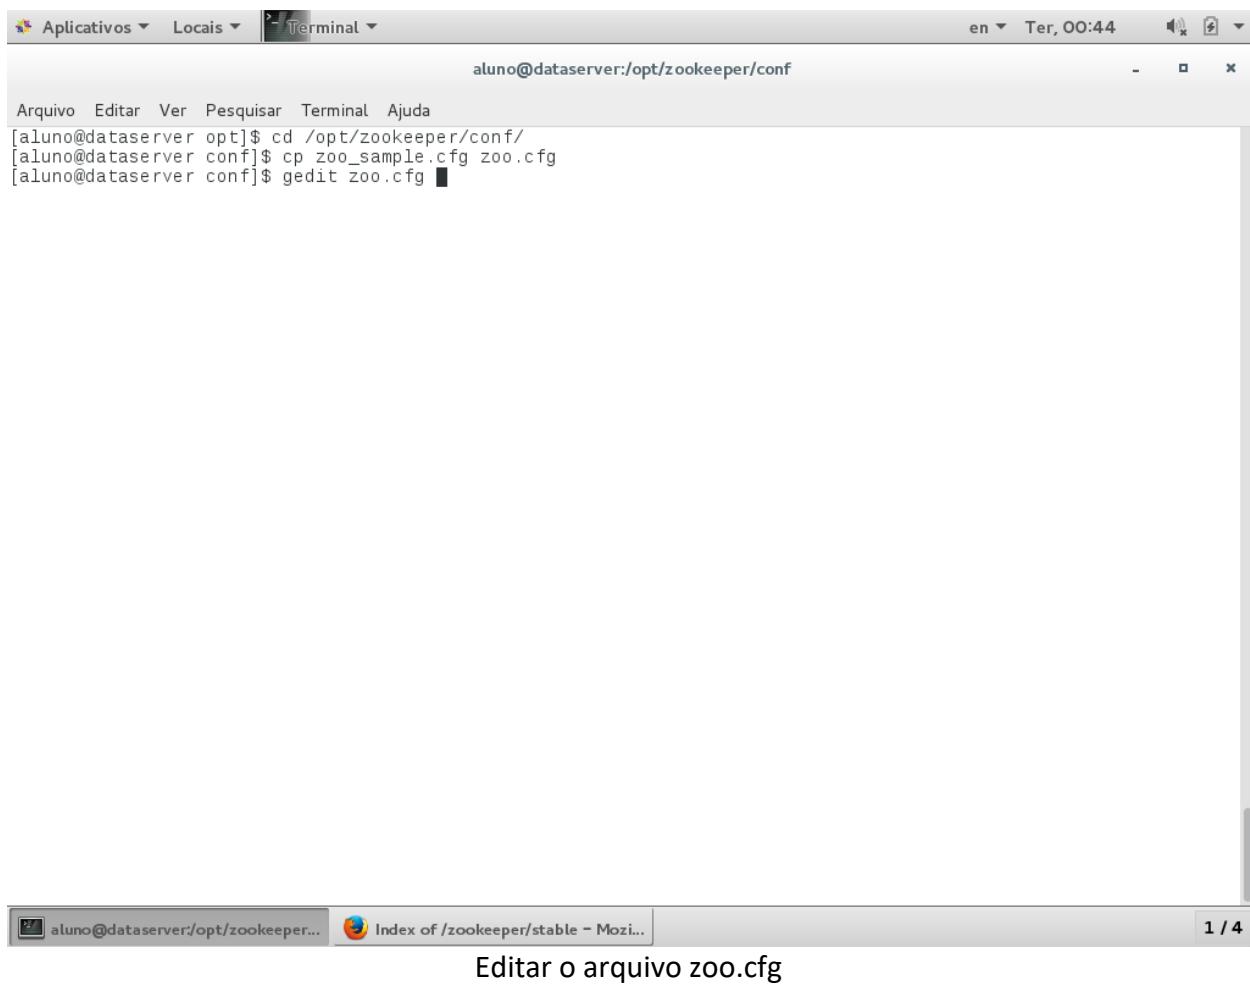

Instalação e Configuração do Ecossistema Hadoop

```
aluno@dataserver:~$ cd /opt/zookeeper/conf/
[aluno@dataserver conf]$ cp zoo_sample.cfg zoo.cfg
```

A partir do arquivo template, gerar o arquivo zoo.cfg

Instalação e Configuração do Ecossistema Hadoop

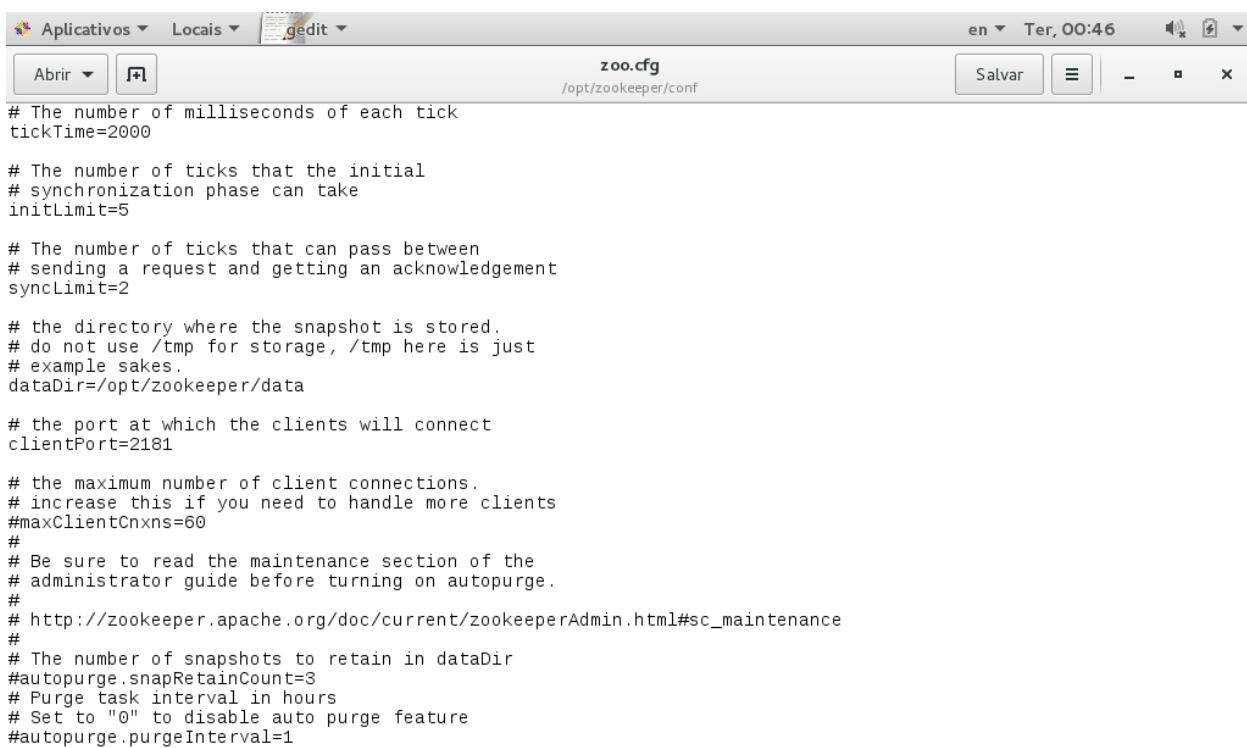

The screenshot shows a terminal window titled "Terminal" with the command prompt "aluno@dataserver:/opt/zookeeper/conf". The user has run the following commands:

```
[aluno@dataserver opt]$ cd /opt/zookeeper/conf/
[aluno@dataserver conf]$ cp zoo_sample.cfg zoo.cfg
[aluno@dataserver conf]$ gedit zoo.cfg
```

Below the terminal window, there is a browser tab labeled "Index of /zookeeper/stable - Mozilla Firefox" and a status bar indicating "1 / 4".

Editar o arquivo zoo.cfg

Variáveis Zookeeper

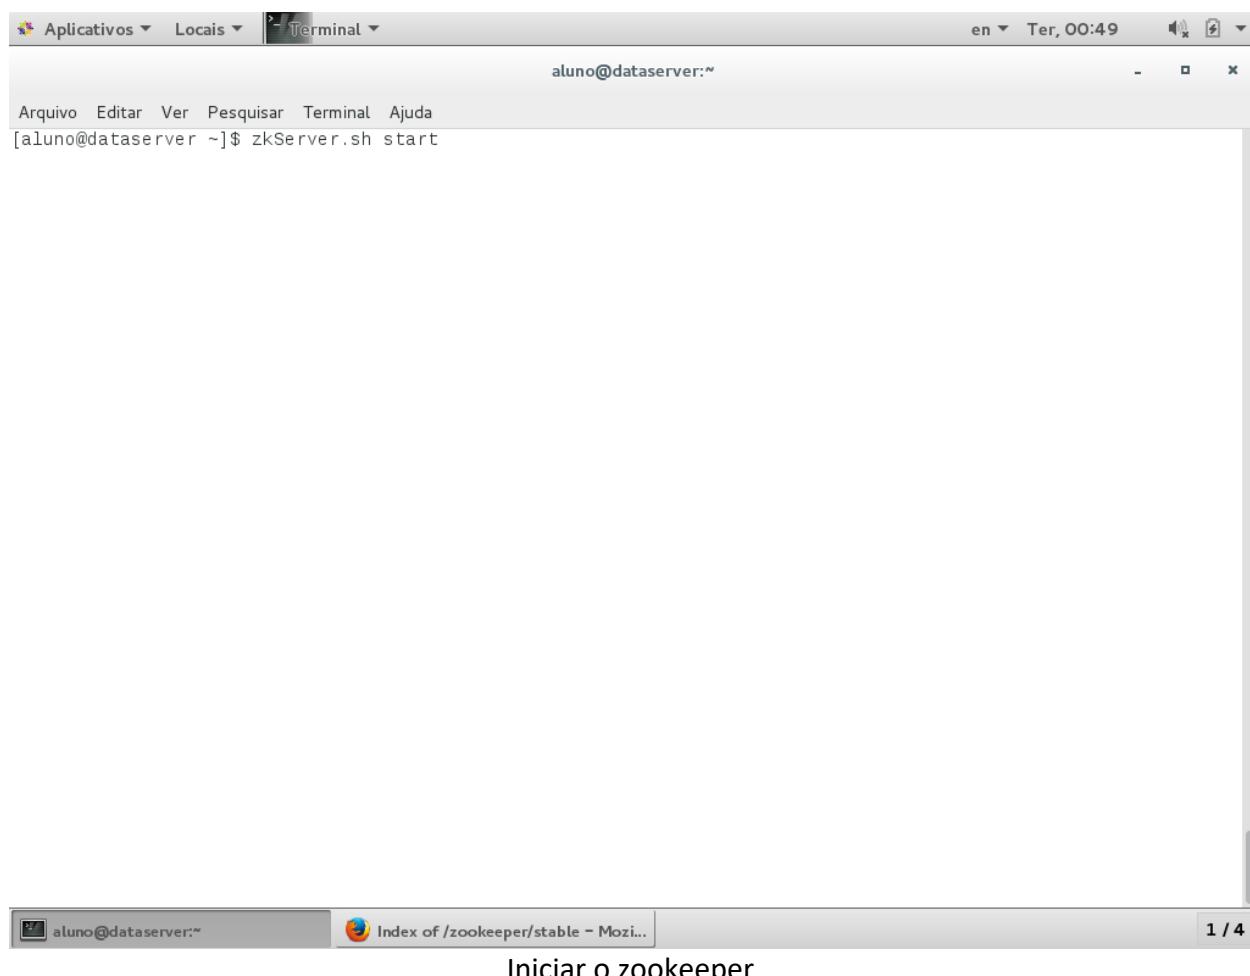

```

Instalação e Configuração do Ecossistema Hadoop

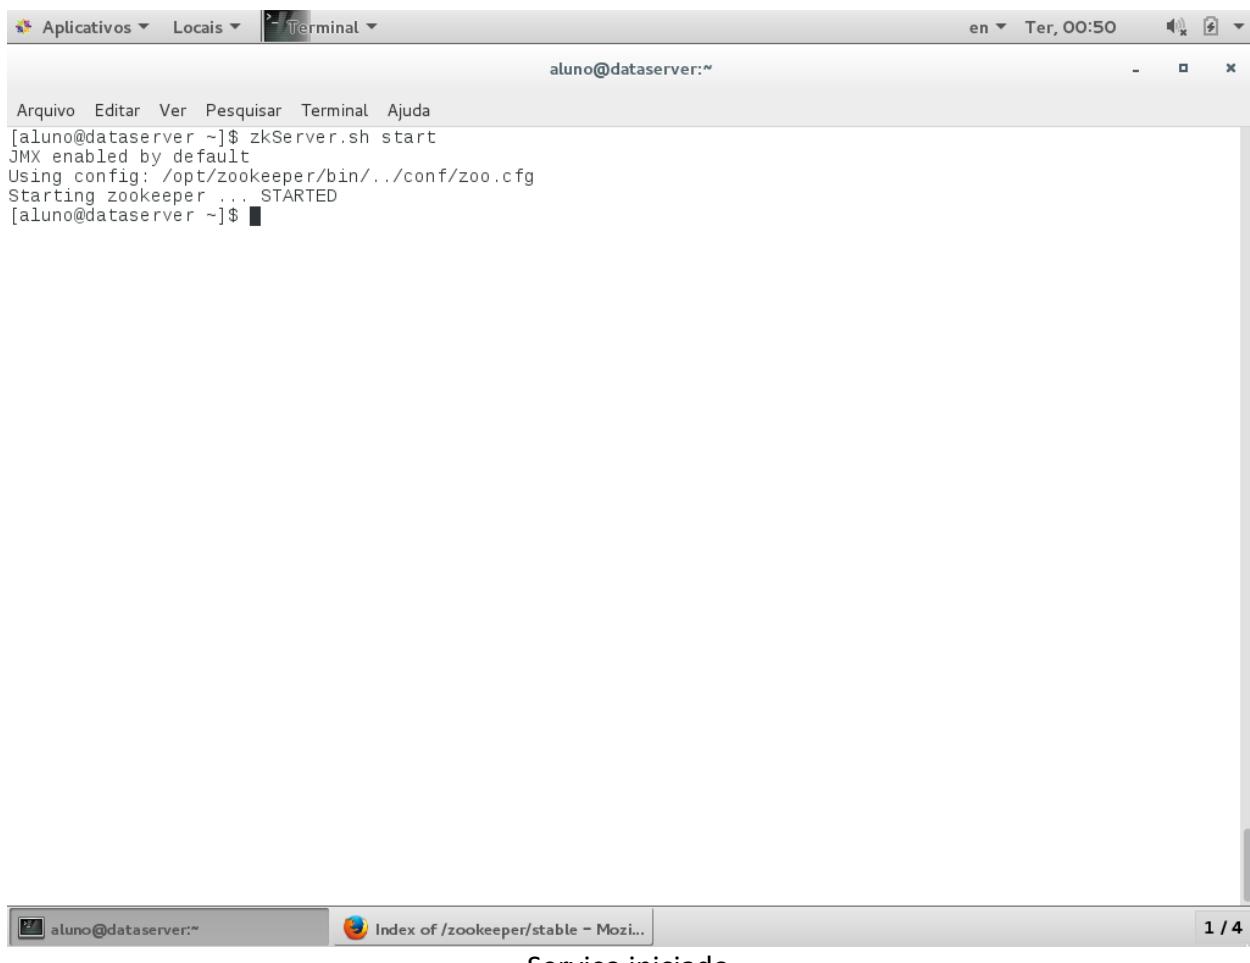

```
aluno@dataserver:~$ mkdir /opt/zookeeper/data
aluno@dataserver ~]$ gedit .bashrc
aluno@dataserver ~]$ source .bashrc
aluno@dataserver ~]$
```

Instalação e Configuração do Ecossistema Hadoop

Iniciar o zookeeper

Instalação e Configuração do Ecossistema Hadoop

```
aluno@dataserver:~$ zkServer.sh start
JMX enabled by default
Using config: /opt/zookeeper/bin/../conf/zoo.cfg
Starting zookeeper ... STARTED
[aluno@dataserver ~]$
```

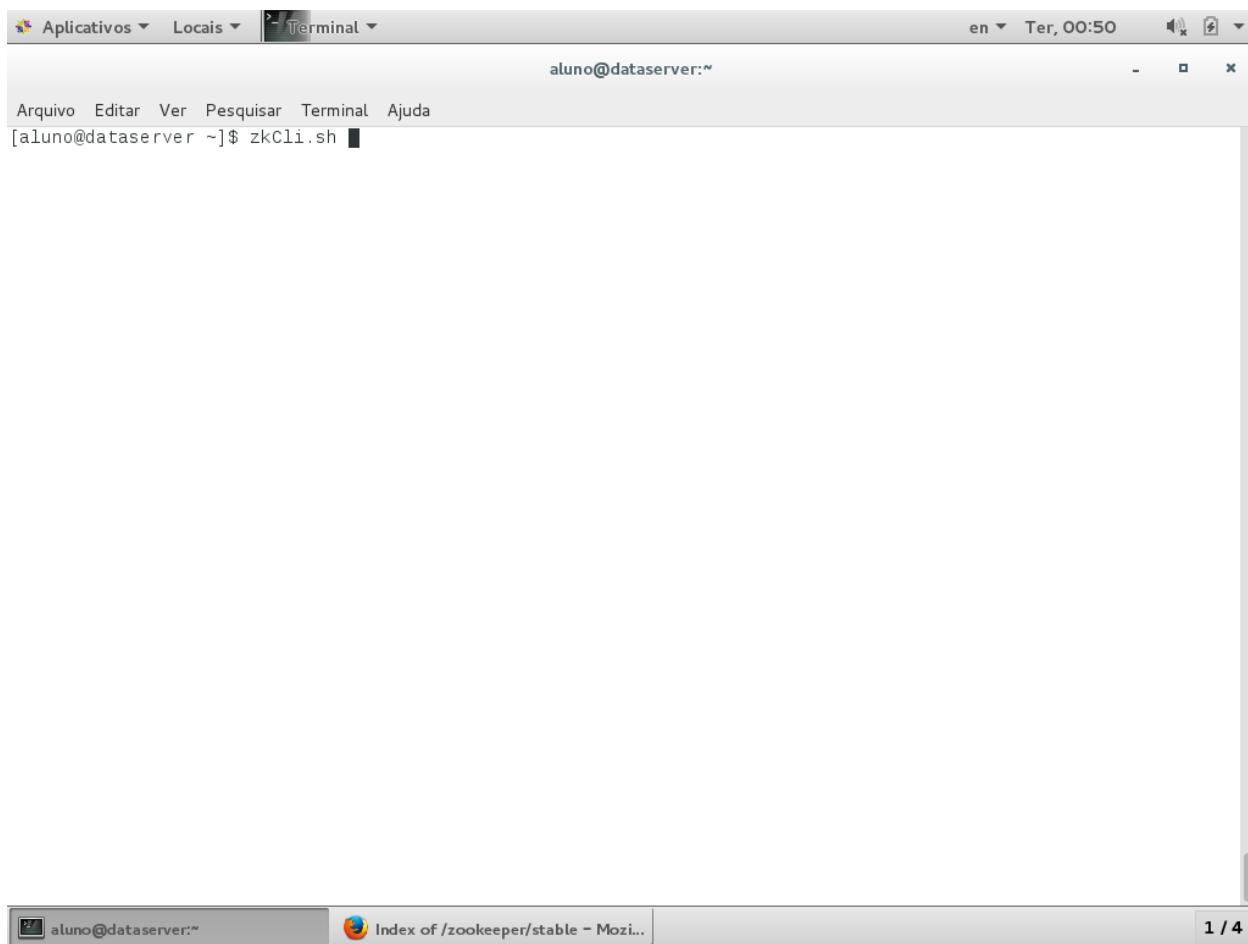

The terminal window shows the command `zkServer.sh start` being run, which starts the ZooKeeper service. The output indicates that JMX is enabled by default, the configuration file is `/opt/zookeeper/bin/../conf/zoo.cfg`, and the service has started successfully.

The browser window shows the index of the `/zookeeper/stable` directory, indicating that the service is up and running.

7. Instalação e Configuração do HBase

Podemos instalar HBase em qualquer um dos três modos: Standalone mode, Pseudo Distributed mode e Fully Distributed mode.

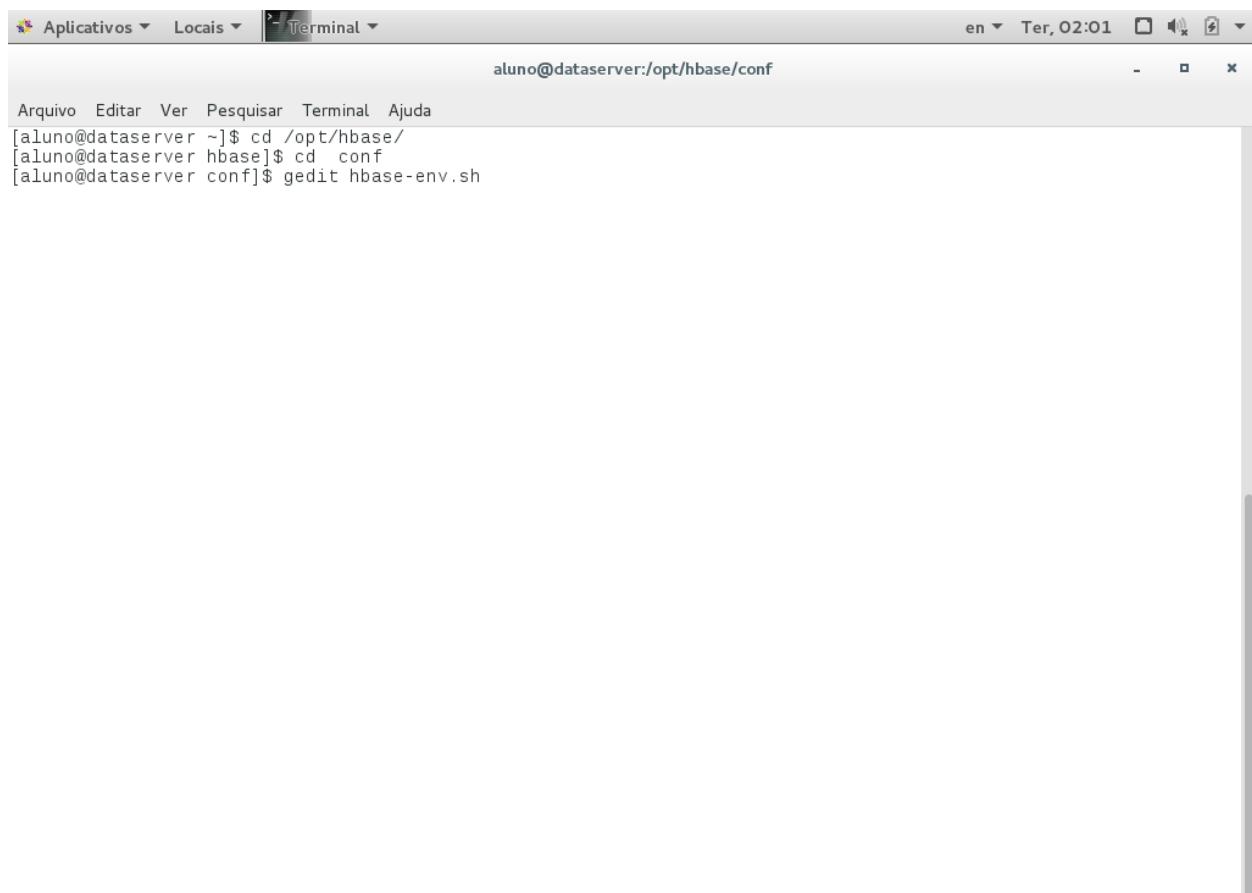

7.1. Download e Instalação do HBase

The screenshot shows a Firefox browser window with the title "Apache HBase – Apache HBase™ Home – Mozilla Firefox". The address bar displays "Apache HBase – Apac... https://hbase.apache.org". The page content includes the Apache HBase logo (red text "APACHE" and "HBASE" with a black orca icon) and a section titled "Welcome to Apache HBase™". It describes HBase as a distributed, scalable, big data store and explains its goal of hosting very large tables. A "Download" section provides a link to download the software, and a "Features" section lists scalability, consistency, and sharding capabilities. The bottom of the page shows a navigation bar with "Apache HBase – Apache HBase™ ..." and "1 / 4".

Faça o download, descompacte o arquivo e mova o diretório para /opt/hbase da mesma forma como você fez com o Java JDK e com o Hadoop.

7.2. Configurando o HBase

```
aluno@dataserver:/opt/hbase/conf
Arquivo Editar Ver Pesquisar Terminal Ajuda
[aluno@dataserver ~]$ cd /opt/hbase/
[aluno@dataserver hbase]$ cd conf
[aluno@dataserver conf]$ gedit hbase-env.sh
```

No diretório /opt/hbase/conf, editar o arquivo hbase-env.sh

Instalação e Configuração do Ecossistema Hadoop

The screenshot shows a terminal window with the title bar "Aplicativos Locais Edit". The main area displays the contents of the file `*hbase-env.sh` located at `/opt/hbase/conf`. The file contains several environment variable assignments and comments. Key sections include setting Java implementation, extra classpath elements, heap size, offheap cache, runtime options, and garbage collection logging. The code uses standard shell syntax with variables like `$JAVA_HOME` and `$HBASE_OPTS`.

```
# Set environment variables here.

# This script sets variables multiple times over the course of starting an hbase process,
# so try to keep things idempotent unless you want to take an even deeper look
# into the startup scripts (bin/hbase, etc.)

# The java implementation to use. Java 1.7+ required.
export JAVA_HOME=/opt/jdk

# Extra Java CLASSPATH elements. Optional.
# export HBASE_CLASSPATH=

# The maximum amount of heap to use. Default is left to JVM default.
# export HBASE_HEAPSIZE=1G

# Uncomment below if you intend to use off heap cache. For example, to allocate 8G of
# offheap, set the value to "8G".
# export HBASE_OFFHEAPSIZE=1G

# Extra Java runtime options.
# Below are what we set by default. May only work with SUN JVM.
# For more on why as well as other possible settings,
# see http://wiki.apache.org/hadoop/PerformanceTuning
export HBASE_OPTS="-XX:+UseConcMarkSweepGC"

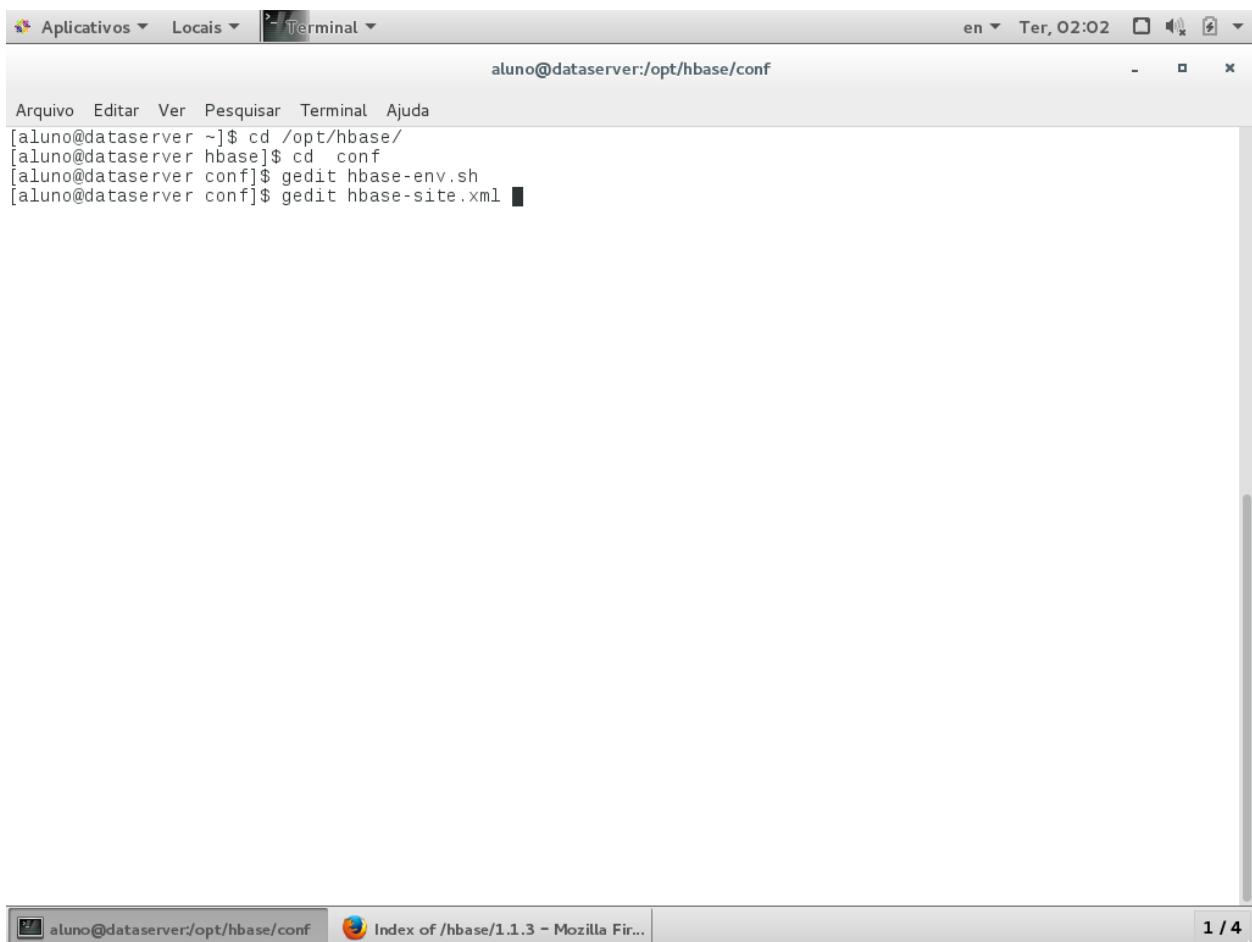

# Configure PermSize. Only needed in JDK7. You can safely remove it for JDK8+
#export HBASE_MASTER_OPTS="$HBASE_MASTER_OPTS -XX:PermSize=128m -XX:MaxPermSize=128m"
#export HBASE_REGIONSERVER_OPTS="$HBASE_REGIONSERVER_OPTS -XX:PermSize=128m -XX:MaxPermSize=128m"
#
# Uncomment one of the below three options to enable java garbage collection logging for the server-side
processes.

# This enables basic gc logging to the .out file.
# export SERVER_GC_OPTS="-verbose:gc -XX:+PrintGCDetails -XX:+PrintGCDateStamps"

# This enables basic gc logging to its own file.
# If FILE-PATH is not replaced, the log file(.gc) would still be generated in the HBASE_LOG_DIR .
# export SERVER_GC_OPTS="-verbose:gc -XX:+PrintGCDetails -XX:+PrintGCDateStamps -Xloggc:<FILE-PATH>"
```

# to control the execution of Hive. It should be used by admins to configure
# the Hive installation (so that users do not have to set environment variables
# or set command line parameters to get correct behavior).
#
# The hive service being invoked (CLI/HWI etc.) is available via the environment
# variable SERVICE

# Hive Client memory usage can be an issue if a large number of clients
# are running at the same time. The flags below have been useful in
# reducing memory usage:
#
# if [ "$SERVICE" = "cli" ]; then
#   if [ -z "$DEBUG" ]; then
#     export HADOOP_OPTS="$HADOOP_OPTS -XX:NewRatio=12 -Xms10m -XX:MaxHeapFreeRatio=40 -XX:MinHeapFreeRatio=15
# -XX:+UseParNewGC -XX:-UseGCOverheadLimit"
#   else
#     export HADOOP_OPTS="$HADOOP_OPTS -XX:NewRatio=12 -Xms10m -XX:MaxHeapFreeRatio=40 -XX:MinHeapFreeRatio=15
# -XX:-UseGCOverheadLimit"
#   fi
# fi

# The heap size of the jvm started by hive shell script can be controlled via:
#
# export HADOOP_HEAPSIZE=1024
#
# Larger heap size may be required when running queries over large number of files or partitions.
# By default hive shell scripts use a heap size of 256 (MB). Larger heap size would also be
# appropriate for hive server (hwi etc).

# Set HADOOP_HOME to point to a specific hadoop install directory

9. Instalação e Configuração do Pig

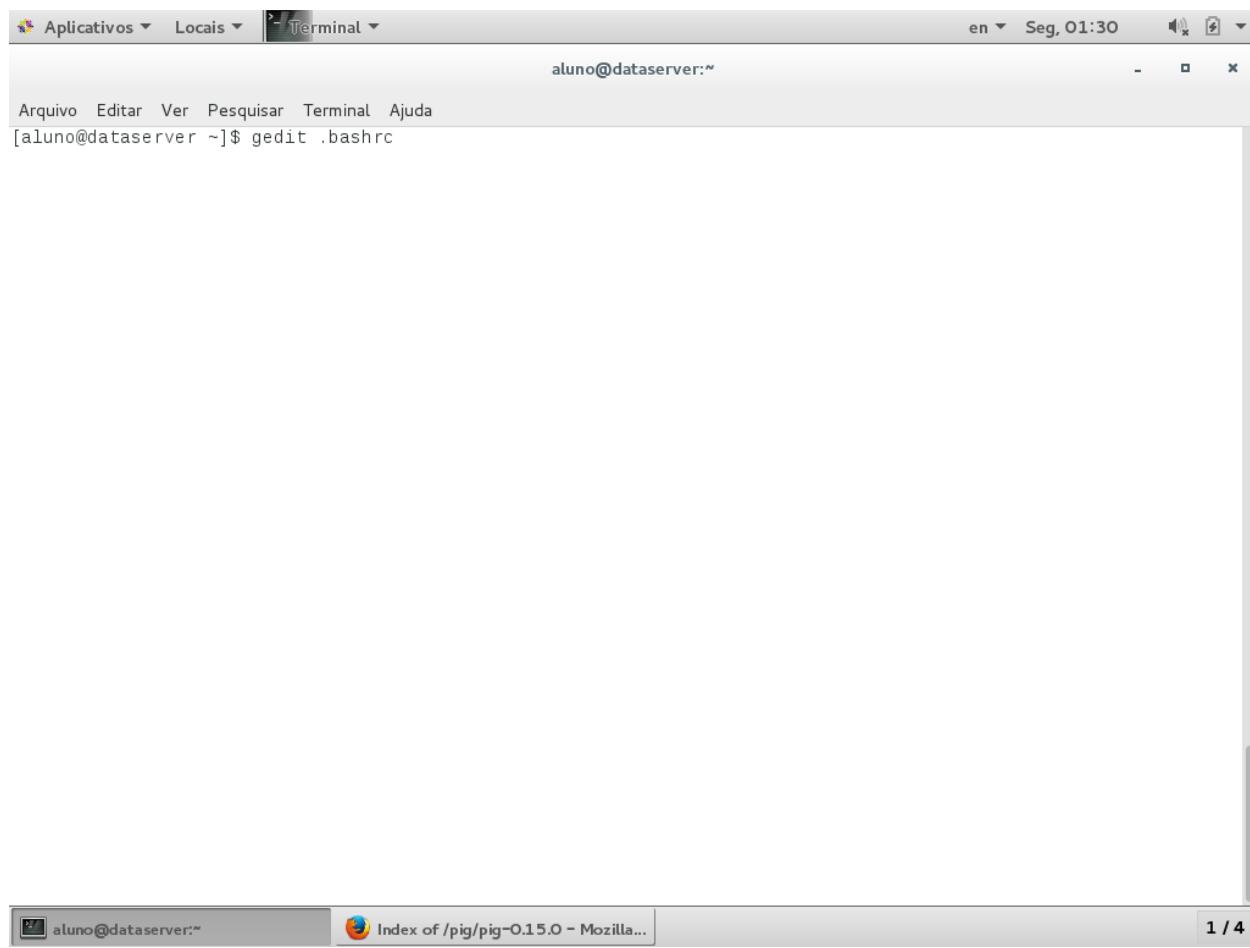

9.1. Download e Instalação do Pig

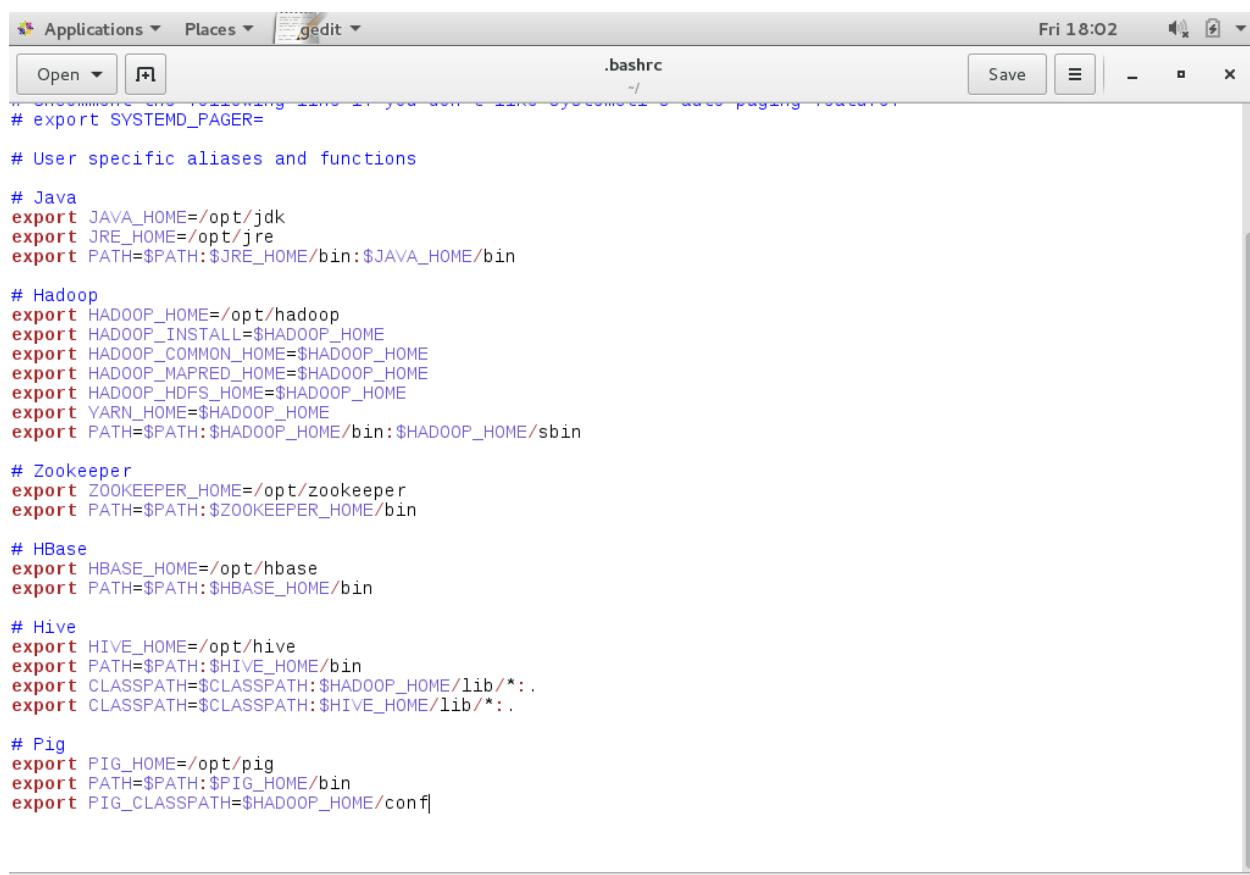

The screenshot shows a Firefox browser window displaying the Apache Pig project page. The URL in the address bar is <https://pig.apache.org>. The page features a large yellow elephant logo with the word "hadoop" next to it. A cartoon pig character is also present. The main content area is titled "Welcome to Apache Pig!". It includes a "News" section with a link to "Apache Pig 0.16.0 is released!", and "Getting Started" and "Getting Involved" links. Below this, a paragraph describes Apache Pig as a platform for analyzing large data sets using a high-level language and parallel execution. There are two bullet points under "Key Properties": "Ease of programming" and "Optimization opportunities". At the bottom of the page, there is a "Download do Pig – Versão 0.17.0" button.

Faça o download, descompacte o arquivo e mova o diretório para /opt/pig da mesma forma como você fez com o Java JDK e com o Hadoop.

9.2. Configurando do Pig

Instalação e Configuração do Ecossistema Hadoop

A screenshot of a Linux desktop environment showing a terminal window. The window title is "Terminal". The terminal prompt is "aluno@dataserver:~". Below the prompt, the menu bar includes "Arquivo", "Editar", "Ver", "Pesquisar", "Terminal", and "Ajuda". A command line at the bottom shows the user typing "[aluno@dataserver ~]\$ source .bashrc". The status bar at the bottom of the terminal window shows "1 / 4".

Instalação e Configuração do Ecossistema Hadoop

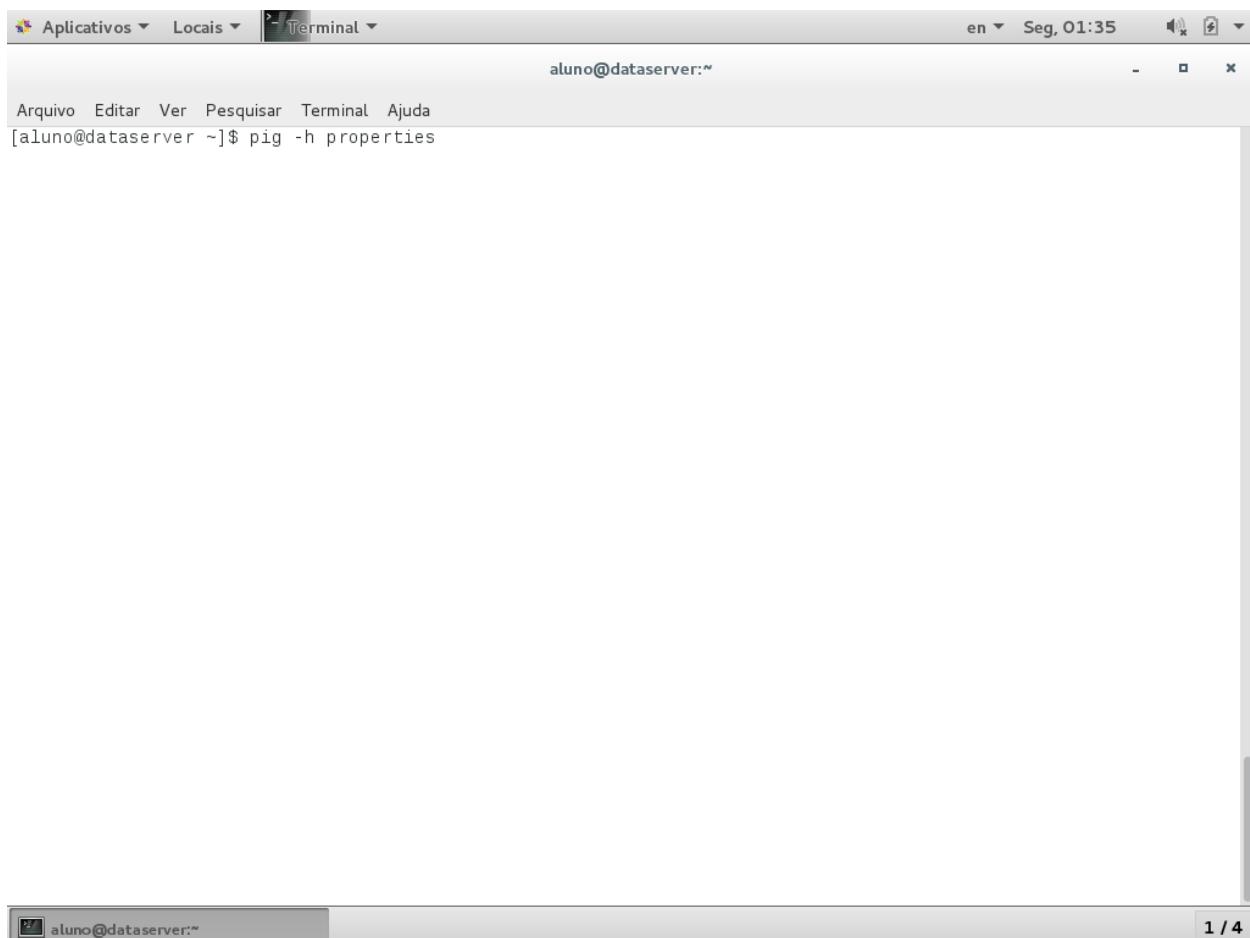

The screenshot shows a terminal window titled "Terminal" with the command prompt "aluno@dataserver:~". The user has run the command "source .bashrc" followed by "pig". The terminal displays a series of INFO log messages from the Apache Pig and Hadoop configurations. These logs indicate the execution type is set to LOCAL, and the configuration provider has chosen MAPREDUCE. It also shows the Apache Pig version (0.15.0) and the Hadoop file system (HDFS://localhost:9000). The logs mention deprecated configuration settings like "mapred.job.tracker" and "fs.default.name" and advise using "mapreduce.jobtracker.address" and "fs.defaultFS" instead. The message "Connecting to hadoop file system at: hdfs://localhost:9000" is present. The session ends with the command "grunt>".

```

```

Logging:
  verbose=true|false; default is false. This property is the same as -v switch
  brief=true|false; default is false. This property is the same as -b switch
  debug=OFF|ERROR|WARN|INFO|DEBUG; default is INFO. This property is the same as -d switch
  aggregate.warning=true|false; default is true. If true, prints count of warnings
    of each type rather than logging each warning.

Performance tuning:
  pig.cachedbag.memusage=<mem fraction>; default is 0.2 (20% of all memory).
    Note that this memory is shared across all large bags used by the application.
  pig.skewedjoin.reduce.memusage=<mem fraction>; default is 0.3 (30% of all memory).
    Specifies the fraction of heap available for the reducer to perform the join.
  pig.exec.nocombiner=true|false; default is false.
    Only disable combiner as a temporary workaround for problems.
  opt.multiquery=true|false; multiquery is on by default.
    Only disable multiquery as a temporary workaround for problems.
  opt.fetch=true|false; fetch is on by default.
    Scripts containing Filter, Foreach, Limit, Stream, and Union can be dumped without MR jobs.
  pig.tmpfilecompression=true|false; compression is off by default.
    Determines whether output of intermediate jobs is compressed.
  pig.tmpfilecompression.codec=lzo|gzip; default is gzip.
    Used in conjunction with pig.tmpfilecompression. Defines compression type.
  pig.noSplitCombination=true|false. Split combination is on by default.
    Determines if multiple small files are combined into a single map.
  pig.exec.mapPartAgg=true|false. Default is false.
    Determines if partial aggregation is done within map phase,
    before records are sent to combiner.
  pig.exec.mapPartAgg.minReduction=<min aggregation factor>. Default is 10.
    If the in-map partial aggregation does not reduce the output num records
    by this factor, it gets disabled.

Miscellaneous:
  exec-type=mapreduce|tez|local; default is mapreduce. This property is the same as -x switch
  pig.additional.jars.uris=<comma separated list of jars>. Used in place of register command.
  udf.import.list=<comma seperated list of imports>. Used to avoid package names in UDF.
  stop.on.failure=true|false; default is false. Set to true to terminate on the first error.
  pig.datetime.default.tz=<UTC time offset>. e.g. +08:00. Default is the default timezone of the host.
    Determines the timezone used to handle datetime datatype and UDFs.

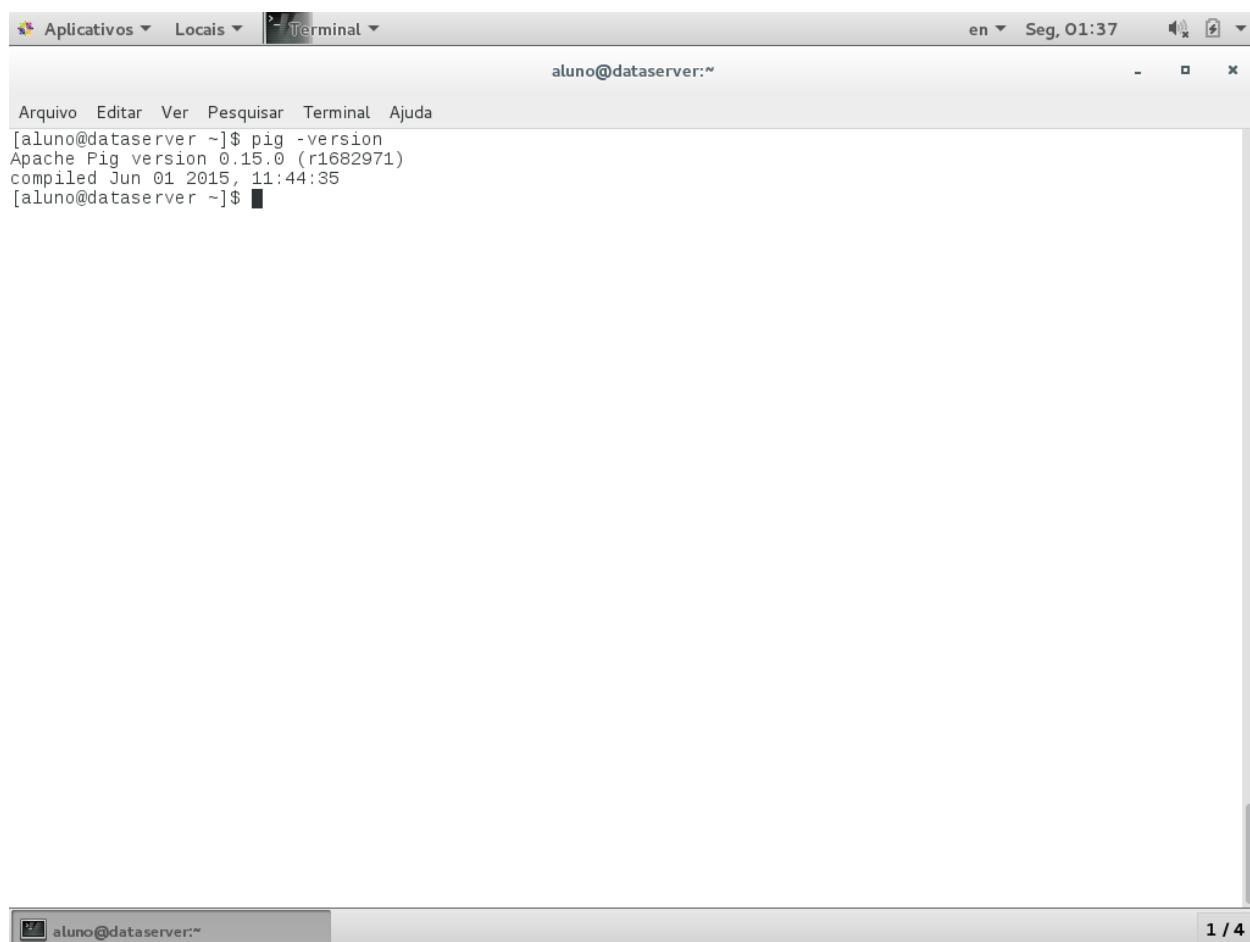

Additionally, any Hadoop property can be specified.
16/02/01 01:36:00 INFO pig.Main: Pig script completed in 224 milliseconds (224 ms)

10. Instalação e Configuração do Spark

10.1. Download e Instalação do Spark

Apache Spark™ is a unified analytics engine for large-scale data processing.

Speed

Run workloads 100x faster.

Apache Spark achieves high performance for both batch and streaming data, using a state-of-the-art DAG scheduler, a query optimizer, and a physical execution engine.

Logistic regression in Hadoop and Spark

System	Running time (s)
Hadoop	110
Spark	0.9

Ease of Use

Write applications quickly in Java, Scala, Python, R, and SQL.

Spark offers over 80 high-level operators that make it easy to build parallel apps. And you can use it *interactively* from the Scala, Python, R, and SQL shells.

```
df = spark.read.json("logs.json")
df.where("age > 21")
.select("name.first").show()
```

Apache Sqoop

Apache Sqoop(TM) is a tool designed for efficiently transferring bulk data between Apache Hadoop and structured datastores such as relational databases.

Sqoop successfully graduated from the Incubator in March of 2012 and is now a Top-Level Apache project: [More information](#)

Latest stable release is 1.4.6 ([download](#), [documentation](#)). Latest cut of Sqoop2 is 1.99.7 ([download](#), [documentation](#)). Note that 1.99.7 is not compatible with 1.4.6 and not feature complete, it is not intended for production deployment.

Download

Download a release of Sqoop from a [nearby mirror](#).

Sqoop source code is held in the Apache GIT repository.

You might clone the repository using following command:

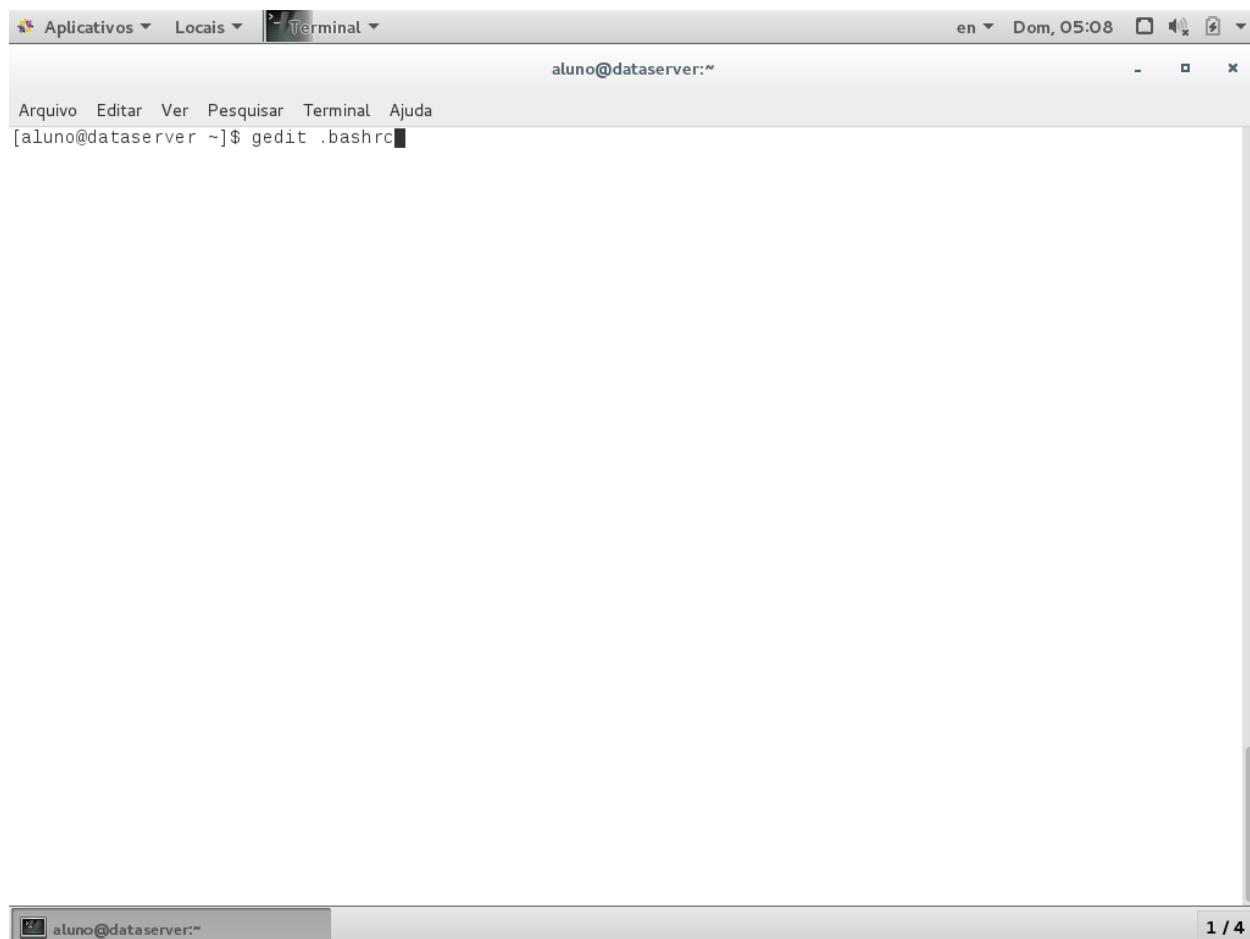

```
git clone https://git-wip-us.apache.org/repos/asf/sqoop.git
```

Use following link to browse the repository online:

Instalação e Configuração do Ecossistema Hadoop

A screenshot of a Linux desktop environment showing a terminal window. The terminal title is "Terminal". The user is logged in as "aluno@dataserver:~". The command "sqoop version" is being typed into the terminal. The terminal window has a standard window title bar with icons for application, location, and terminal, along with system status icons like battery and volume.

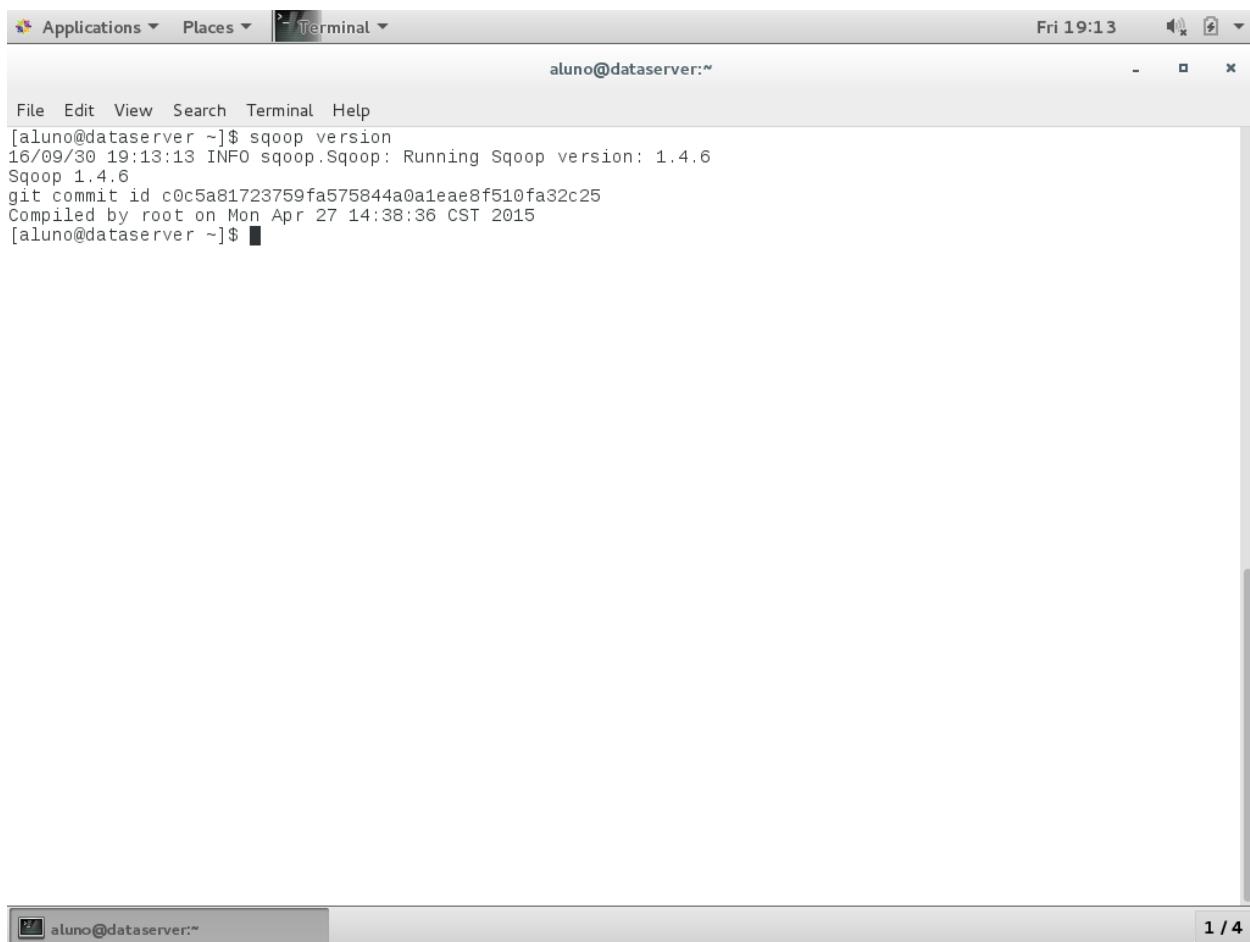

aluno@dataserver:~

Arquivo Editar Ver Pesquisar Terminal Ajuda

[aluno@dataserver ~]\$ sqoop version

Instalação e Configuração do Ecossistema Hadoop

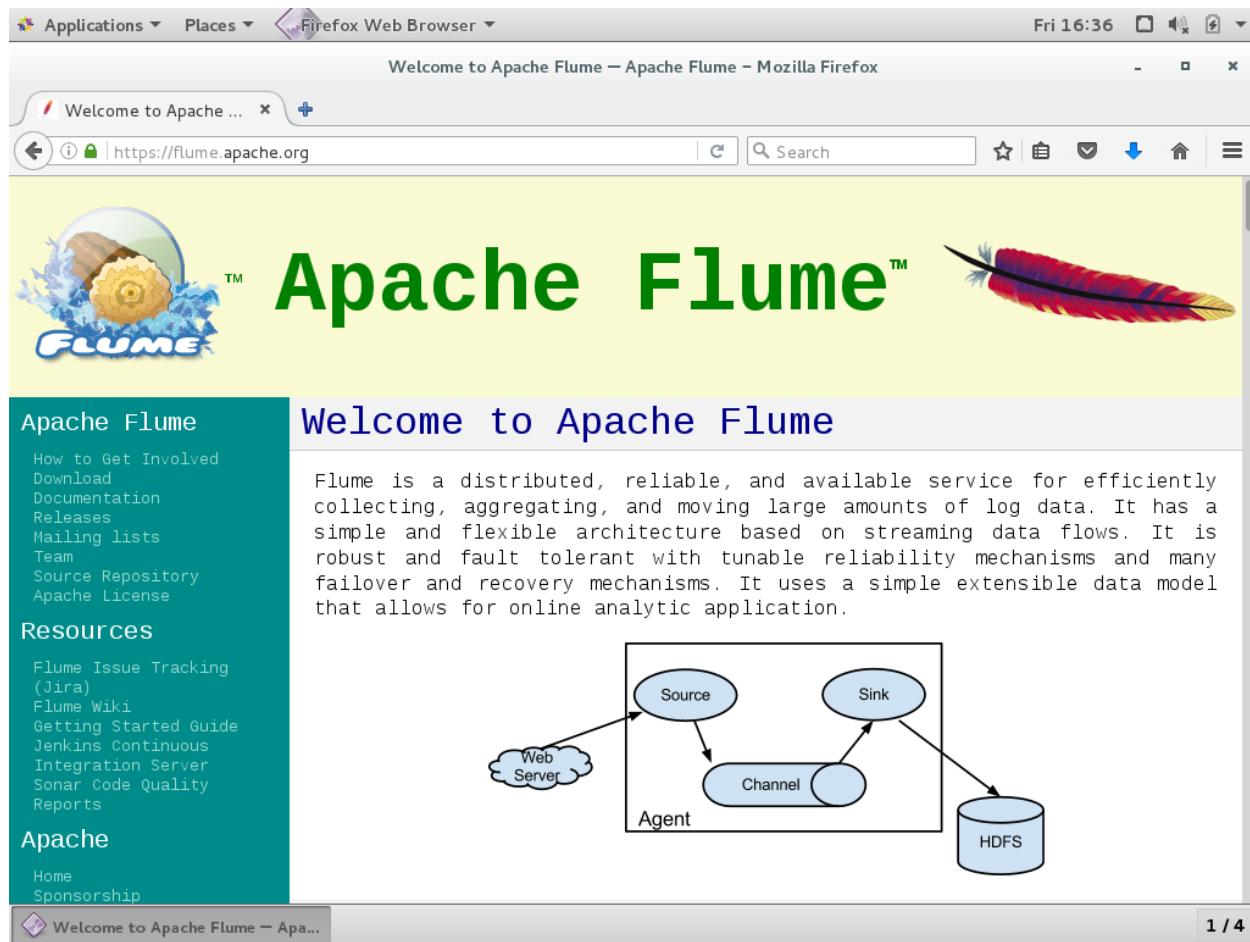

The screenshot shows a terminal window titled "Terminal" with the user "aluno@dataserver:~". The terminal displays the following command and its output:

```
[aluno@dataserver ~]$ sqoop version
16/09/30 19:13:13 INFO sqoop.Sqoop: Running Sqoop version: 1.4.6
Sqoop 1.4.6
git commit id c0c5a81723759fa575844a0a1eae8f510fa32c25
Compiled by root on Mon Apr 27 14:38:36 CST 2015
[aluno@dataserver ~]$
```

The terminal window has a title bar with "Applications", "Places", and "Terminal". The status bar at the bottom shows "1 / 4".

Download do Apache Flume – Versão 1.9

Faça o download, descompacte o arquivo e mova o diretório para /opt/flume da mesma forma como você fez com o Java JDK e com o Hadoop.

Instalação e Configuração do Ecossistema Hadoop

The screenshot shows a terminal window titled "Terminal". The window title bar includes "Applications", "Places", and "Terminal". The status bar at the top right shows "Fri 19:41". The terminal prompt is "aluno@dataserver:~". The menu bar includes "File", "Edit", "View", "Search", "Terminal", and "Help". The command history shows:

```
[aluno@dataserver ~]$ pwd  
/home/aluno  
[aluno@dataserver ~]$ gedit .bashrc
```

The bottom status bar shows "aluno@dataserver:~" and "1 / 4".

```

commands:
  help           display this help text
  agent          run a Flume agent
  avro-client    run an avro Flume client
  version        show Flume version info

global options:
  --conf,-c <conf>      use configs in <conf> directory
  --classpath,-C <cp>    append to the classpath
  --dryrun,-d            do not actually start Flume, just print the command
  --plugins-path <dirs>  colon-separated list of plugins.d directories. See the
                        plugins.d section in the user guide for more details.
                        Default: $FLUME_HOME/plugins.d
  -Dproperty=value     sets a Java system property value
  -Xproperty=value     sets a Java -X option

agent options:
  --name,-n <name>       the name of this agent (required)
  --conf-file,-f <file>   specify a config file (required if -z missing)
  --zkConnString,-z <str> specify the ZooKeeper connection to use (required if -f missing)
  --zkBasePath,-p <path>  specify the base path in ZooKeeper for agent configs
  --no-reload-conf       do not reload config file if changed
  --help,-h               display help text

avro-client options:
  --rpcProps,-P <file>   RPC client properties file with server connection params
  --host,-H <host>        hostname to which events will be sent
  --port,-p <port>        port of the avro source
  --dirname <dir>         directory to stream to avro source
  --filename,-F <file>    text file to stream to avro source (default: std input)
  --headerFile,-R <file>  File containing event headers as key/value pairs on each new line
  --help,-h               display help text

Either --rpcProps or both --host and --port must be specified.

Note that if <conf> directory is specified, then it is always included first
in the classpath.

Pronto para configuração do cluster

Quarto checkpoint:

Clique no meu File – Export Appliance.
Será gerada uma cópia de segurança da sua máquina virtual.

→ VM: DataServer-vFinal.ova (Completa)

Parabéns!

Você tem um ambiente de testes para
armazenar e processar Big Data!
